LOCATE AN APPROPRIATE LOCATION 遠離障礙物及人群

R/C aircraft can fly at high speed, thus posing a certain degree of potential danger. Choose a legal flying field consisting of flat, smooth ground without obstacles. Do not fly near buildings, high voltage cables, or trees to ensure the safety of yourself, others, and your model. Avoid location with magnetic and radio interferences. Please choose a legal flying field. Do not fly your model in inclement weather, such as rain, wind, snow or darkness.

遙控無人機飛行時具有一定的速度，相對的也潛在著危險性，場地的選擇也相對的重要，請需遵守當地法規到合法遙控飛行場地飛行。必須注意周遭有沒有人民、高樓、建築物、高壓電線、樹木等，避免磁場干擾、外力訊號干擾及操控的不慎造成自己與他人財產的損壞。請務必選擇在空曠合法認證的飛行場地。請勿在下雨、打雷、沙塵等惡劣天候下操作，以確保本身及機體的安全。

NOTE ON LITHIUM POLYMER BATTERIES 鋰聚電池注意事項

- Be sure to unplug the battery when storing the helicopter after completing operations, otherwise it may cause damage to the battery due to over-discharge or unexpected accidents such as fire.
- Lithium batteries are dangerous and flammable items. When charging the battery, the operator is strictly prohibited from leaving and staying away from flammable items. Otherwise, the operator will be responsible for all losses caused by any accidents caused.
- 無人機操作完畢後收藏時一定要拔除電池，否則可能導致電池過放的損壞或起火燃燒，導致不可預期的意外發生。
- 鋰電池屬危險易燃物品，充電過程中，務必遠離易燃環境及物品，並確保在可視範圍內進行操作。嚴禁！操作人員離開，否則導致的任何意外，操作者需自負所有造成的損失責任。

Lithium Polymer batteries are significantly more volatile than alkaline or Ni-Cd/Ni-MH batteries commonly used in RC applications. All manufacturer's instructions and warnings must be followed closely. Mishandling of Li-Po batteries can result in fire. Always follow the manufacturer's instructions when disposing of Lithium Polymer batteries.

鋰聚電池跟一般在RC使用的鉛酸電池、銀錫電池、銀氫電池比較起來是相對危險的。請嚴格遵守鋰聚電池說明書之使用注意事項。不恰當使用鋰聚電池，可能造成火災並傷及生命財產安全，切勿大意！

**PROPER OPERATION 勿不當使用本產品**

Do not attempt to modify the aircraft to alter its intended design. Please use only designated replacement parts listed in the manual to ensure its design structure integrity. Operate this product within its intended design parameters; do not overload it with excess cargo. This product is limited to personal hobby use, and pilot should be proficient with operation of this model. Follow all local law and ordinances when operating. Do not use this product for purposes which may violate others personal privacy, and respect other's intellectual properties. Do not use this product for illegal purposes or beyond the bonds of common safety.

請勿自行改造加工，任何的升級改裝或維修，請使用亞拓產品目錄中的零件，以確保結構的安全。請確認該產品裝設內操作，請勿過載使用，本產品為休閒娛樂專用之精密電子遙控飛行產品，僅限熟練遙控飛行器之個人使用。使用時請遵守當地法律規定，並嚴禁在任何違反公共安全區域操作，請勿利用本產品侵犯他人隱私/公開權、並尊重他人智慧財產權、著作權，且勿用於安全、法令外之其它非法用途。並充分了解您任何的使用與操作必須負完全的責任。

**DO NOT FLY ALONE 避免獨自操控**

Before turning on your model and transmitter, check to make sure no one else is operating on the same frequency. Frequency interference can cause your model, or other models to crash. The guidance provided by an experienced pilot will be invaluable for the assembly, tuning, trimming, and actual first flight or unforeseen danger may happen. (Recommend you to practice with experienced pilots or with computer-based flight simulator firstly.)

至飛行場飛行前，需確認是否有相同頻率的同好正進行飛行，因為開啓相同頻率的發射機將導致自己與他人立即干擾等意外危險。遙控無人機操控技巧在學習初期有著一定的難度，要盡量避免獨自操作飛行，需有經驗的人士在旁指導，才可以操控飛行，否則將可能造成不可預期的意外發生。(勤練電腦模擬器及老手在場指導是入門必要的選擇)

**SAFE OPERATION 安全操作**

Operate this unit within your ability. Do not fly while feeling impaired, as improper operation may result in danger. Never take your eyes off the model or leave it unattended while it is turned on. Immediately turn off the model and transmitter when you have landed the model.

請於自己能力內及需要一定技術範圍內操作這台遙控無人機，遇於疲勞、精神不佳或不當操作，意外發生風險將可能會提高。不可在視線範圍外飛行，降落後也請馬上關掉遙控無人機和遙控器電源。

**ALWAYS BE AWARE OF THE ROTATING BLADES**

遠離運動中零件

During the operation of the multicopter, the rotor will be spinning at a high rate of speed. The blades are capable of inflicting serious bodily injury and damage to surrounding properties. Be conscious of your actions, and careful to keep your face, eyes, hands, and loose clothing away from the blades. Always fly the model a safe distance from yourself and others, as well as surrounding objects.

遙控無人機主旋翼/螺旋槳運動時會以高轉速下進行，在高轉速下的主旋翼/螺旋槳會造成自己與他人在身體上或環境上的嚴重損傷，請勿觸摸運動中的主旋翼/螺旋槳。並保持安全距離以避免造成危及及損壞。

MOTOR ROTATION DIRECTION 馬達正逆轉方向

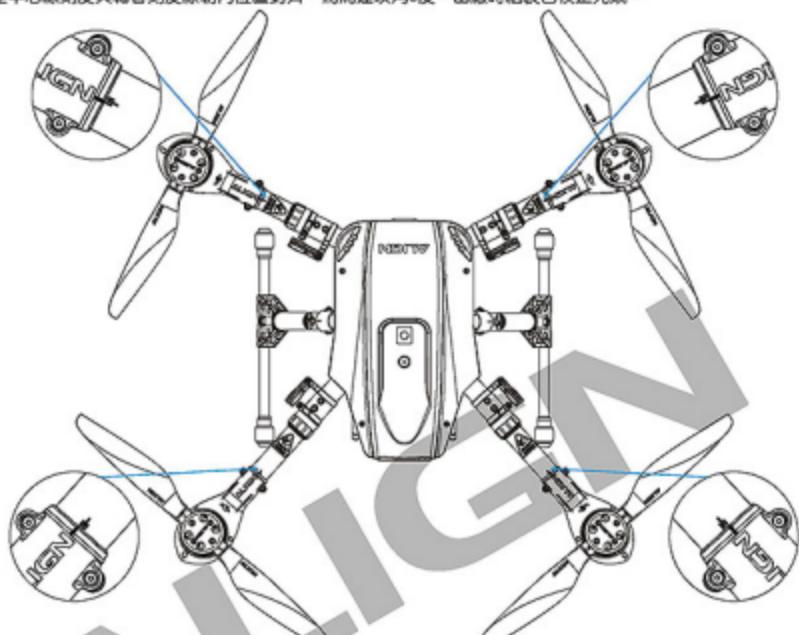

CAUTION 注意

Identify the direction identifier on each motor mounts: R (clockwise) rotation motor must match R rotation blades; L (counter-clockwise) rotation motor must match L rotation blades. Incorrect sequence of motor tube assembly or changes made to rotational directions of motor I blades may cause immediate flip-over on takeoff, and result in unforeseen dangerous situation.

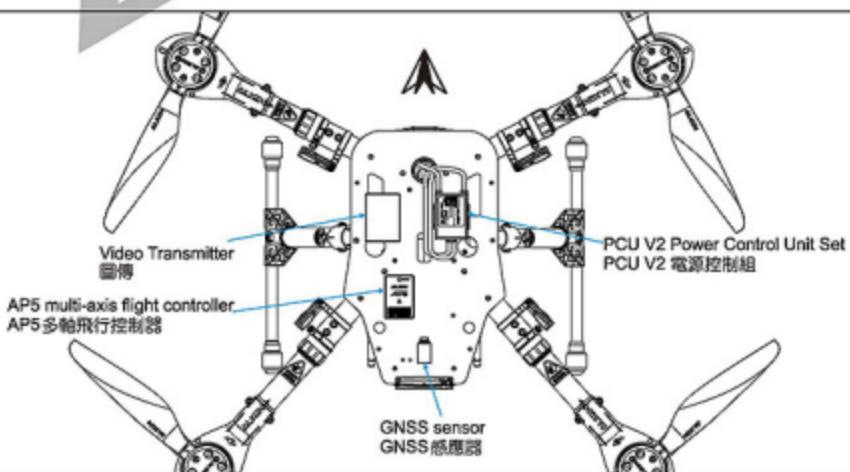

馬達固定座上所標示的正、逆轉方向符號：R向馬達組必須搭配R向主旋翼；L向馬達組必須搭配L向主旋翼。馬達軸管順序組裝錯誤或自行更改馬達、主旋翼R/L轉向，將會造成機體升空後翻滾、撞毀，嚴重的將導致不可預期的意外發生。

The center line scale of the motor base is aligned with the shaft tube scale line inward, which is the motor attack angle of 5 degrees. The assembly has been corrected before leaving the factory.

**MOTOR DETECTION 馬達檢測**

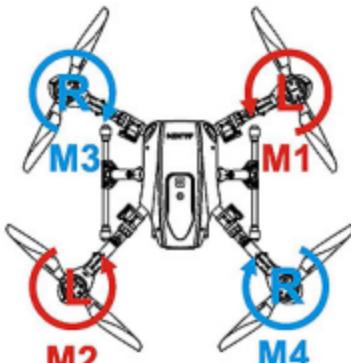

When using this function, the motors M1, M4, M2, and M3 will slowly rotate clockwise for about 3 seconds. During the test, be sure to carefully check whether the steering of each motor is normal. Wrong steering will cause an accidental rollover during takeoff. The rotor rotation process is dangerous. When inspecting, please first confirm that there are no debris around the multi-axis machine, and people should stay away from the main rotor rotation range to avoid danger.

使用此功能時，馬達會順時針方向 M1、M4、M2、M3 依序慢速轉動約3秒，測試時務必仔細檢視各馬達轉向是否正常，錯誤的轉向將導致起飛時翻滾意外，馬達主齒輪轉動過程有危險性，檢測時請先確認多軸機旁無雜物，並且人要避開主齒輪轉動範圍，以免發生危險。

WARNING 警告

When testing, please confirm that the motor rotates in sequence from M1, M4, M2, M3 clockwise. Please check whether the rotation direction printed on the motor base is correct. If it is incorrect, please do not fly.

檢測時，請確認馬達由順時針方向 M1、M4、M2、M3 依序轉動，請核對是否與馬達底座印刷轉動方向正確，如果不正確，請勿飛行。

AP3 OFFER TWO KINDS OF MISSION PLANNER AP3具備兩種任務規劃方式**1. REMOTE TARGET ROUTE PLANNER 遠端路徑規劃**

STAY AWAY FROM OBSTACLES AND CROWDS 遠離障礙物與人群

R/C aircraft can fly at high speed, thus posing a certain degree of potential danger. Choose a legal flying field consisting of flat, smooth ground without obstacles. Do not fly near buildings, high voltage cables, or trees to ensure the safety of yourself, others, and your model. Avoid location with magnetic and radio interferences. Please choose a legal flying field. Do not fly your model in inclement weather, such as rain, wind, snow or darkness.

遙控無人機飛行時具有一定的速度，相對的也潛在著危險性，場地的選擇也相對的重要，請需遵守當地法規到合法遙控飛行場地飛行。必須注意周遭有沒有人、高樓、建築物、高壓電線、樹木等等。避免磁場干擾、外力訊號干擾及操控的不當造成自己與他人財產的損傷。請務必選擇在空曠合法專屬飛行場地。請勿在下雨、打雷、沙塵等惡劣天候下操作，以確保本身及機體的安全。

**DO NOT FLY ALONE 避免獨自操控**

Before turning on your model and transmitter, check to make sure no one else is operating on the same frequency. Frequency interference can cause your model, or other models to crash.

The guidance provided by an experienced pilot will be invaluable for the assembly, tuning, trimming, and actual first flight or unforeseen danger may happen. (Recommend you to practice with experienced pilots or with computer-based flight simulator firstly.)

至飛行場飛行前，需確認是否有相同頻率的同好正進行飛行，因為開啓相同頻率的發射機將導致自己與他人立即干擾著意外危機。遙控無人機操控技巧在學習初期有著一定的難度，要盡量避免獨自操作飛行，需有經驗的人士在旁指導，才可以操控飛行，否則將可能造成不可預期的意外發生。
(勤練電腦模擬器及老手在場指導是入門必要的選擇)

**DO NOT POINT THE DRONE TOWARDS YOUR EYES 禁止將無人機對著眼睛**

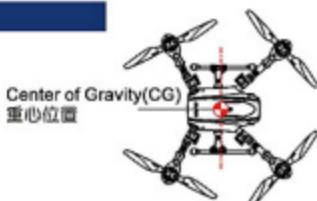

It is strictly forbidden to grab the running drone with your hands, and it is forbidden to point the drone towards your eyes. After the main rotor rotates, or when taking off/test flight, be sure to stay away from obstacles. The standing position must be more than 10 meters away to avoid human interference. Improper assembly may cause parts to fall off, causing unexpected damage to property and personnel.

嚴禁用手抓取運行中的無人機，並禁止將無人機對著眼睛，當主旋翼轉動後，或起飛／試飛時，務必遠離障礙物，站立位置必須距離10公尺以上，避免因人為組裝不當造成零件脫落，而引發不可預期的財物及人員損傷。

**CENTER OF GRAVITY ADJUSTMENT 重心調校**

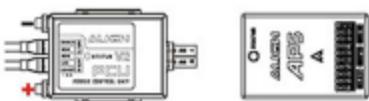

The aircraft needs to be balanced at the Center of Gravity(CG) point with full payload onboard. Improper CG balance may cause flight instability and/or uneven power consumption of the motors, and may even leads to crash in worse case scenario.

飛行前務必確認，並調整好全載重機體的重心位置，偏移的重心容易導致飛行不穩與馬達受力不均的耗電、損傷，嚴重將導致不可預期的失衡摔機。

**CHECK THE WIRE DIRECTION 檢查插線**

Make sure to install the wires with "up" imprint facing up, and ensure the plug is inserted deep enough. Improper plug insertion may lead to poor connection or even malfunction of the unit.

插線時，請務必將刻有UP字樣端口朝上，對準插座後，確實將插頭完全插入到底，若無確實插入定位，將導致接觸不良、飛行控制系統不動作等問題產生！

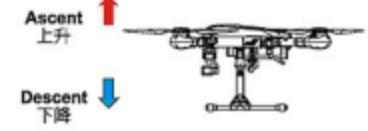

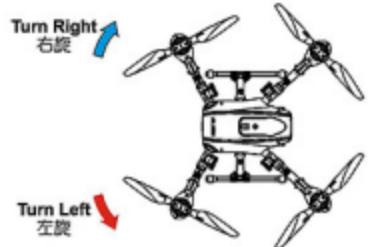

PLEASE PRACTIOTEC SIMULATION FLIGHT BEFORE REAL FLYING
飛行前請事先熟練電腦模擬飛行

A safe and effective way to practice is to use commercially available simulator software to fly on a computer launcher. Carry out simulated flight until your fingers are familiar with the rudder movements, and continue practicing until your fingers are familiar with the rudder movements.

1. Place the helicopter in an open area (make sure the power is turned off) and point the tail of the helicopter towards you.
2. Practice operating the throttle stick (as shown below) and repeat the exercise "Throttle high/low", "Aileron left/right", "rudder left/right" and "elevator up/down".
3. Simulated flight practice is very important, please keep practicing until you hear Until the fingers can move naturally when operating instructions.

在還沒瞭解無人機各動作的操控方式前，嚴禁實機飛行。請先進行電腦模擬飛行的練習，一種最有效、最安全的練習方式，就是透過市面販售的模擬軟體，以遙控器在電腦上模擬飛行，熟悉各種方向的操控，並不斷的重複，直到手指可熟練的控制各個動作及方向。

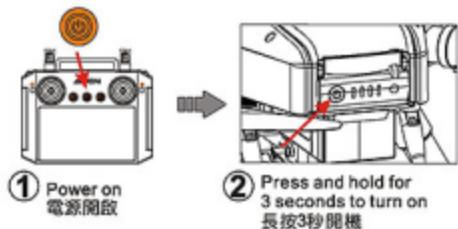

1. 將無人機放在空曠的地方(確認電源為關閉)，並將昇昇機的機頭對準自己。
2. 練習操作遙控器的各搖桿(各動作的操作方式如下圖)，並反覆練習油門高/低、副翼左/右、升降舵前/後及方向舵左/右操作方式。
3. 模擬飛行的練習相當重要，請重複練習直到不需思索，手指能自然隨著喊出的指令移動控制。

腳架確實落地，下拉油門到底2秒後，再打左右搖桿(向內向下)或(向外向下)45°即可快速關閉馬達動力。

- When the motor running test function is turned on, the motor will slowly rotate M1, M4, M2, and M3 clockwise for about 3 seconds. Check whether the installation position and the main rotor rotation direction are consistent.
- The rotation process of the main rotor of the motor is dangerous. When inspecting, please first confirm that there is no debris around the drone and avoid the rotation range of the main rotor to avoid danger.
- 馬達運轉測試功能開啓時，馬達會順時針方向M1、M4、M2、M3依序慢速轉動約3秒，檢查安裝位置及主旋翼旋轉方向是否一致。
- 馬達主旋翼旋轉過程有危險性，檢測時請先確認無人機旁無雜物，並避開主旋翼轉動範圍，以免發生危險。

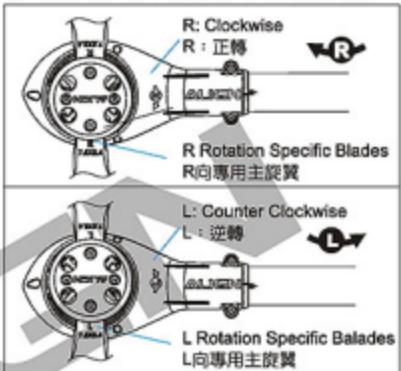

MOTOR ROTATION DIRECTION

馬達正逆轉方向

Please confirm the forward and reverse direction symbols marked on the motor holder.

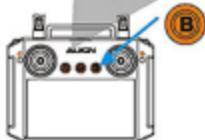

請確定馬達固定座上所標示的正、逆轉方向符號。

RETRACT TEST 腳架收放測試

Test the retract switch on RC transmitter and do retraction for 2 to 3 times prior to flight.

飛行前應測試腳架收放功能，切換收腳架按鍵開關微
腳架收放動作2~3次，確定收合動作正常。

CAUTION 注意

To avoid getting your hands pinched, do not touch retracts while in motion.

請勿觸碰正在進行收放腳架的收折處，避免夾傷手。

There are two ways of retracting and retracting the tripod:

- Automatic tripod retraction: When the drone takes off and rises to 5M, the system will automatically retract the tripod. When the drone lands at 4M during flight, the system will automatically lower the tripod.
- Manual tripod retraction: Turn off the automatic function and switch to manual control of the tripod retracting and retraction function.

Automatic foot retraction function switch: You can choose to turn it on or off from Common Settings>>Flight Control Parameter Settings>>Automatic Foot Retraction.

- 手動收腳架：關閉自動功能，切換為手動控制收放腳架功能。

自動收腳功能開啓：可由常用設置>>飛控參數設置>>自動收腳，選擇開啟或關閉。

Attitude/GPS/ Auto Navigation 姿態 / GPS / 自動導航

When the drone loses the remote control signal, the system will automatically return home if there is a GPS signal. If there is no GPS signal, the drone will maintain a level attitude. You can set the return altitude and return speed before flying.

當無人機丟失遙控器訊號時，在有GPS訊號下，系統會執行自動返航。在無GPS訊號下，無人機會保持姿態水平。飛行前可先設定返航高度、返航速度。

Setting Method 設定方式

1. Open the APP and select the [Common Settings] icon
1. 開啓APP，選(常用設置)icon

2. Enter [Flight Control Parameter Settings] to set the return altitude and return speed.
2. 進入(飛控參數設置)設定返航高度、返航速度。

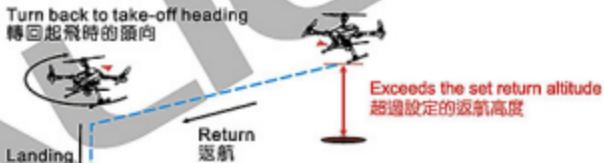

Flight Status 飛行狀態

1. When the drone exceeds the set return altitude:

- a) The drone returns home at the current flight altitude and head towards the Home point.
- b) When returning above the Home point, the drone will turn back to the head direction when taking off, lower the tripod first, and then land.
- c) The system will automatically shut down the motor power after the drone lands.

**LOW VOLTAGE PROTECTION**

低電壓保護

When the battery power of the drone is low, the system voice will prompt "Battery power is low, please return as soon as possible to replace the battery." In this case, please return as soon as possible to replace the battery.

**Attitude/GPS/
Auto Navigation**
姿態 / GPS / 自動導航

The system provides two types of low voltage protection and will issue a voice warning prompt:

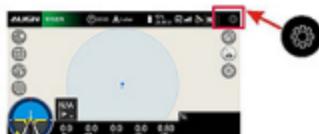

1. When the low battery voltage reaches 20%, the system voice will prompt "Battery voltage is too low, perform return". At this time, the drone will automatically return to the home point and land on its own. Please replace the battery.
2. When the low battery voltage reaches 8%, the voice will prompt "The battery voltage is seriously low, please land immediately to replace the battery." At this time, the drone will land at the current location to avoid crashing due to too low battery.

You can set the return altitude and return speed before flying.

當無人機電池電量低，系統語音會提示「電池電量低，請盡速返航更換電池」，此時請盡速返航更換電池。

系統提供兩種低電壓保護，同時會發出語音警告提示：

1. 當電量低電壓到達20%時，系統語音會提示「電池電壓過低，執行返航」，此時無人機會執行自動返航回到home點上方後自行降落，請更換電池。
 2. 當電量低電壓到達8%時，語音會提示「電池電壓嚴重過低，請立即降落更換電池」，此時無人機會降落在當時地點，以避免因為電量太低而摔機。
- 飛行前可先設定返航高度、返航速度。
