## Polaris Nuclear Submarine ABRAHAM LINCOLN

Die Entwicklung der Polaris U-Boot Generation hat nach allgemeiner Ansicht das Kräfteverhältnis zwischen Ost und West in den 1960er Jahren sehr beeinflusst. Die US-Navy konzentrierte ihre Produktionsaufträge auf diesen Typ, der zu jener Zeit Hauptbestandteil der amerikanischen U-Boot-Flotte war. Bei der Polaris-Klasse handelt es sich um ein U-Boot mit Nuklearantrieb und einer Bestückung mit ballistischen Lenkwaffen. Dank des Nuklearantriebs fährt es mit einer Geschwindigkeit von über 35 Knoten über Wasser und 20 Knoten unter Wasser und kann mehrere hundert Stunden unter Wasser bleiben. Dieses U-Boot ist ausgerüstet mit 16 Polaris-Mittelstrecken-Lenkwaffen, die unter Wasser abgeschossen werden können. Diese verfügen über einen nuklearen Sprengkopf und eignen sich für Überraschungsangriffe. Ihre Reichweite beträgt mehr als 2.000 km. Der riesige Lagerraum für die 16 Polaris-Lenkwaffen wird von der Mannschaft scherhaft „Sherwood Forest“ genannt. Der Unterwasserstart der Polaris-Lenkwaffen geschieht per Druckluft. Insgesamt hatte die US Navy über 50 U-Boote dieses Typs im Einsatz. Standard-Wasserverdrängung: 5.600 t (unter Wasser 6.700 t); Länge: 115,80 m.

## Polaris Nuclear Submarine ABRAHAM LINCOLN

The development of the Polaris generation of submarines is generally regarded as having had a strong influence on the balance of power between East and West in the 1960s. The US Navy concentrated its production orders on this type, which at that time was the main constituent of the American submarine fleet. The Polaris Class consists of nuclear powered submarines armed with ballistic missiles. Thanks to the nuclear power it is capable of a speed of over 35 knots on the surface and 20 knots submerged and can stay underwater for hundreds of hours. This submarine is equipped with 16 Polaris medium-range guided missiles that can be fired from under water. These missiles are equipped with nuclear warheads and are suitable for surprise attacks. They have a range of over 2,000 km. The gigantic magazine for the 16 Polaris missiles is known facetiously by the crews as "Sherwood Forest". The Polaris missiles are launched underwater by compressed air. The US Navy has in total over 50 submarines of this type in service. Standard displacement: 5,600 tonnes (submerged 6,700 tonnes); length: 115.80 m.
