

**Honda RC 211 V**

Zur Saison 2002 gab es bedeutende Veränderungen im Motorrad-Sport. So war es nun erlaubt, in der neu gegründeten Moto GP Klasse Bikes mit 990 ccm Hubraum zu fahren. Zudem griff man in der Königsklasse auf 4 Takt-Motoren zurück, was sich zur Freude vieler Fans in der Akustik deutlich bemerkbar machte.

Honda bereitete sich akribisch und zielgerichtet auf diese Neuerungen vor und antwortete auf diese technischen Herausforderungen mit einer geradezu revolutionären Rennmaschine, der neuen RC 211 V. Die Honda verfügt über einen innovativen Fünfzylinder-Viertakt-Motor mit 3 vorne und 2 hinten angebrachten Zylindern. Wie überlegen sich die gerade einmal 145 kg leichte Maschine mit 230 PS Leistung und einer Höchstgeschwindigkeit von 320 km/h zeigte, bewies der Saisonverlauf des Jahres 2002. Sofort beherrschte die Honda die 1. Grand Prix Weltmeisterschaft souverän. Neben ihrer technischen Überlegenheit, die sich auch in beachtlichen Beschleunigungswerten (von 0 auf 100 km/h in 2,2 Sekunden und von 0 auf 200 in 6,0 Sekunden) dokumentiert, lag dies vorwiegend an Valentino Rossi.

Der junge, äußerst talentierte Fahrer, machte schon 1996 bei seiner ersten Teilnahme an der Weltmeisterschaft in der Achtelliterklasse Dank seines außergewöhnlichen Fahrstils auf sich aufmerksam. Schon im Jahr darauf wird er Weltmeister in der 125er Klasse, gefolgt von einem weiteren WM Titel in der Viertelliter-Kategorie 1999 sowie 2001 in der damaligen 500er Klasse. Der bis dahin dreifache Weltmeister, der sich den Namen „The Doctor“ selbst verliehen hat, beendete in der Saison 2002 stolze 11 Rennen von insgesamt 17 GP-Rennen als Sieger. Erneut erkämpfte er sich damit überlegen den WM-Fahrertitel. Sein Teamkollege, Tohru Ukawa, gewann außerdem den Grand-Prix von Südafrika und Honda sicherte sich, auch dank dieser professionellen Fahrer, den WM Konstruktionstitel 2002.

Honda RC 211 V

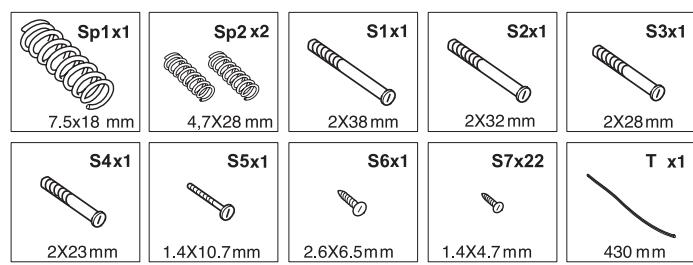

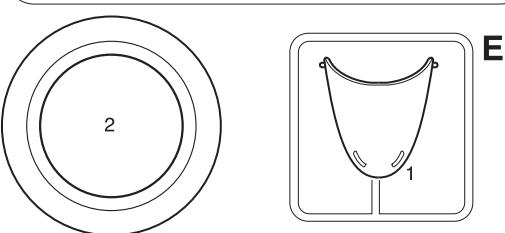

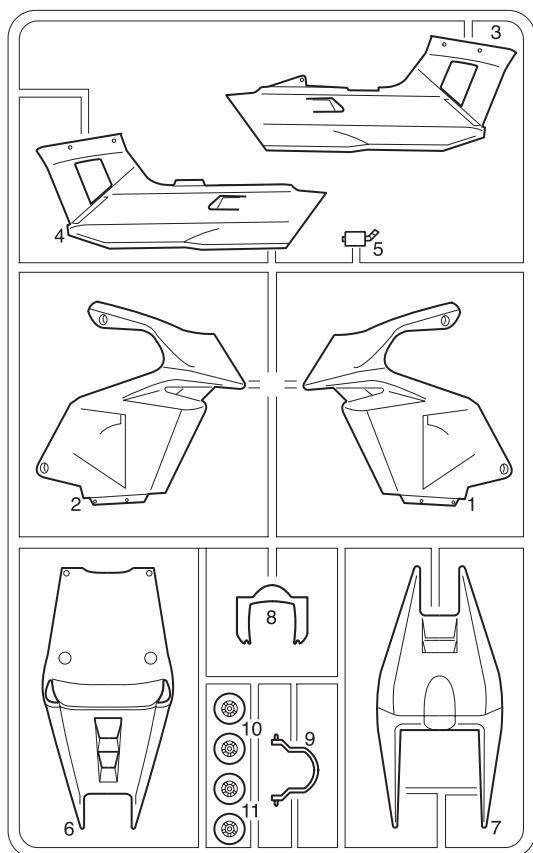

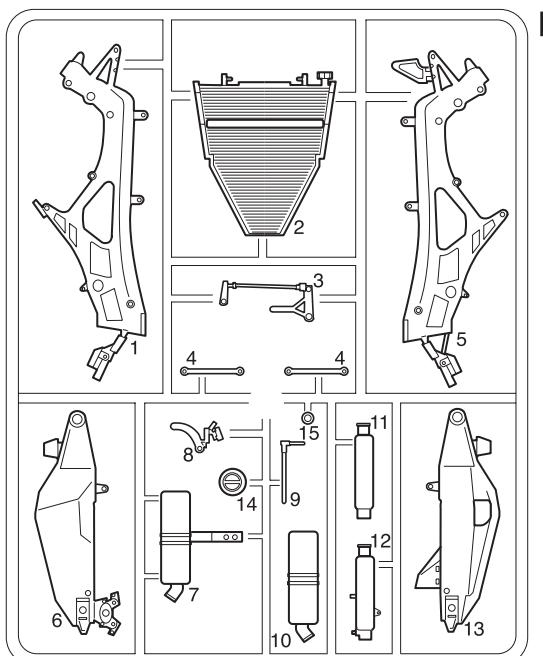

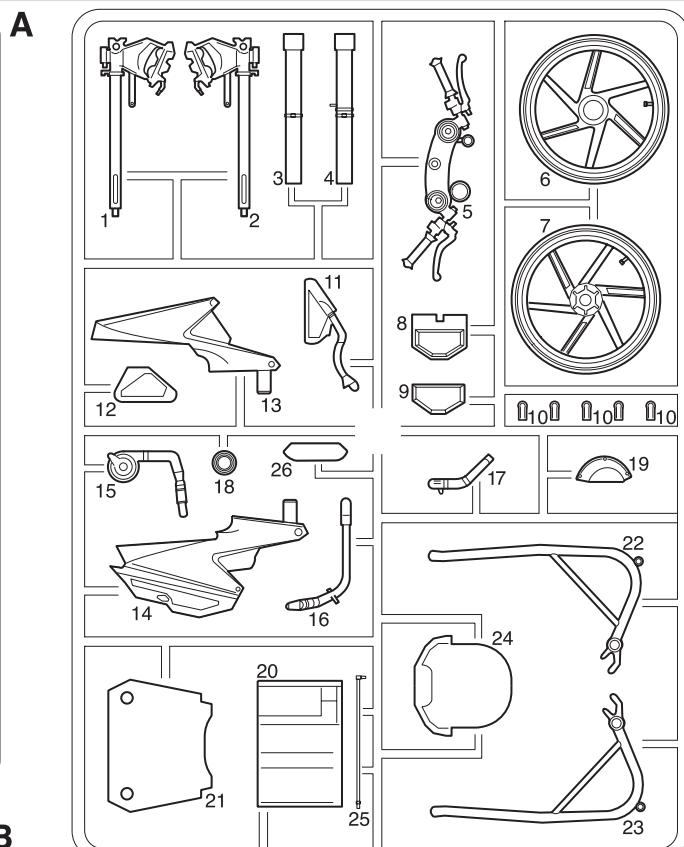

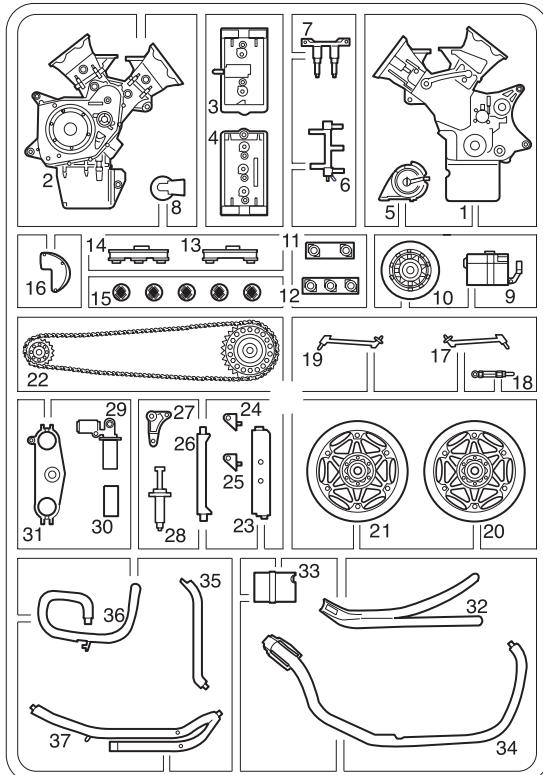

Some important changes took place in motor cycle racing during the 2002 season. It was now permissible to drive 990 cc bikes in the newly formed MotoGP Class. In addition, in the Superbike Class there was a return to 4-stroke engines, which was clearly audible to the joy of many fans.

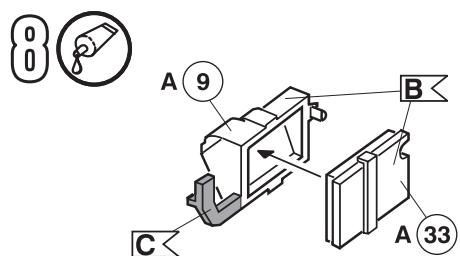

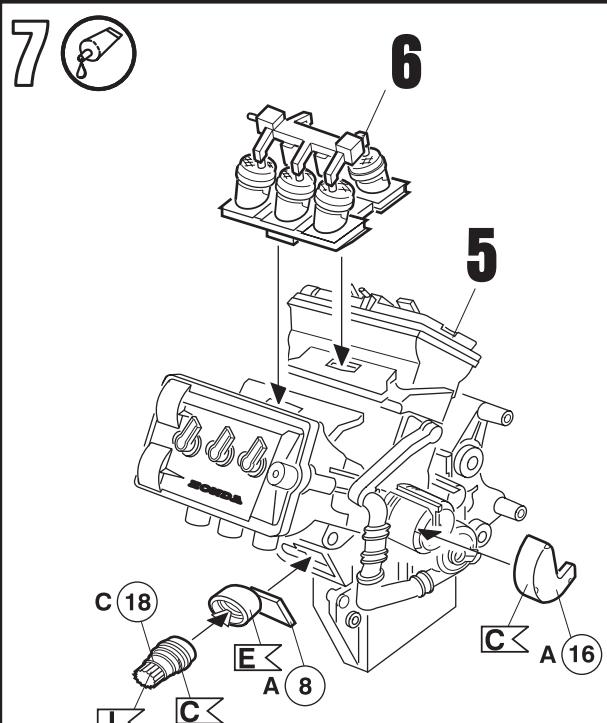

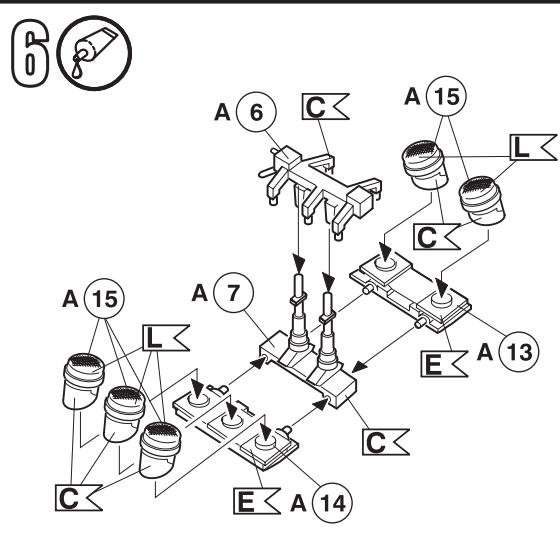

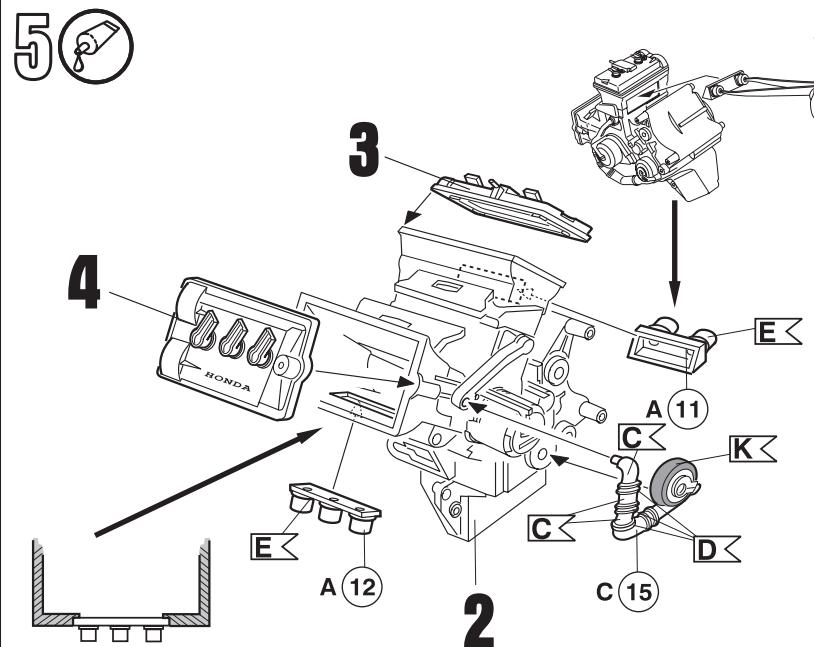

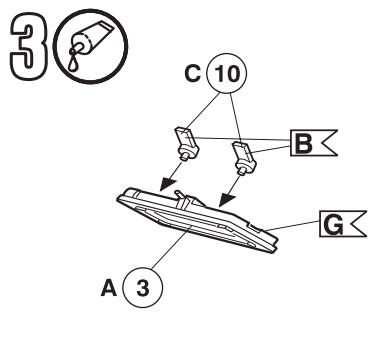

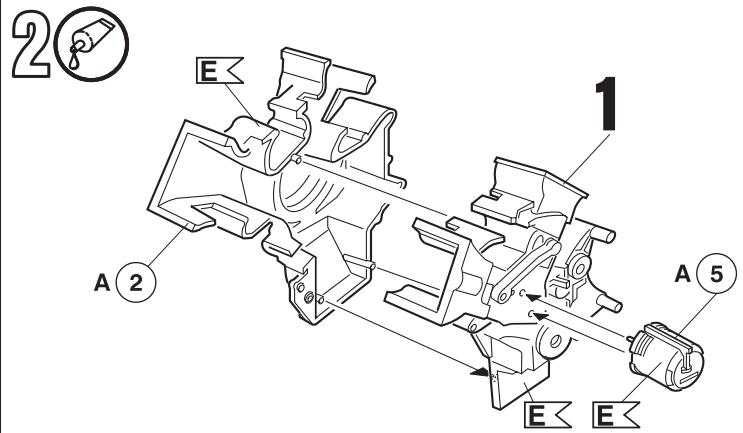

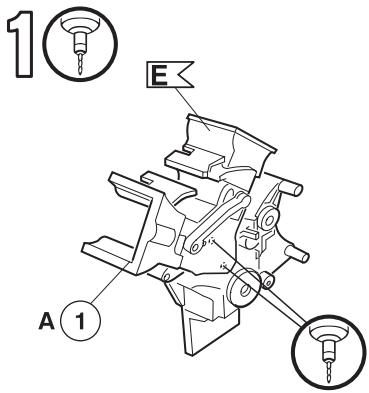

Honda prepared for these new changes with great precision and application and responded to the technical requirements with a quite revolutionary racing machine, the new RC211V. The Honda has an innovative four stroke, five cylinder engine with three cylinders in front and 2 behind. The superiority of this light 145 kg machine delivering 230 bhp and a top speed of 320 kph was proved in the course of the 2002 season. The Honda immediately dominated the 1st Grand Prix World Championship. Apart from the technical superiority that showed in its impressive acceleration (from 0 to 100 kph in 2.2 seconds and from 0 to 200 in 6.0 seconds), this was primarily down to Valentino Rossi.

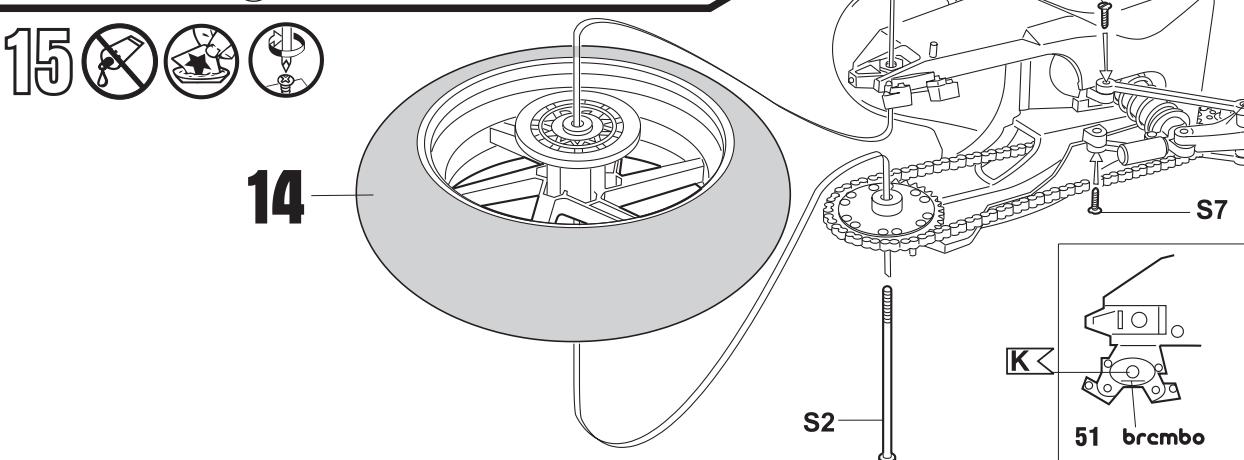

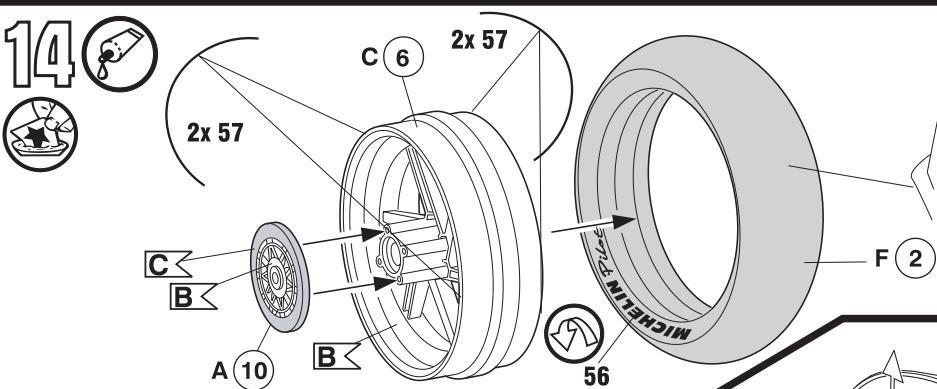

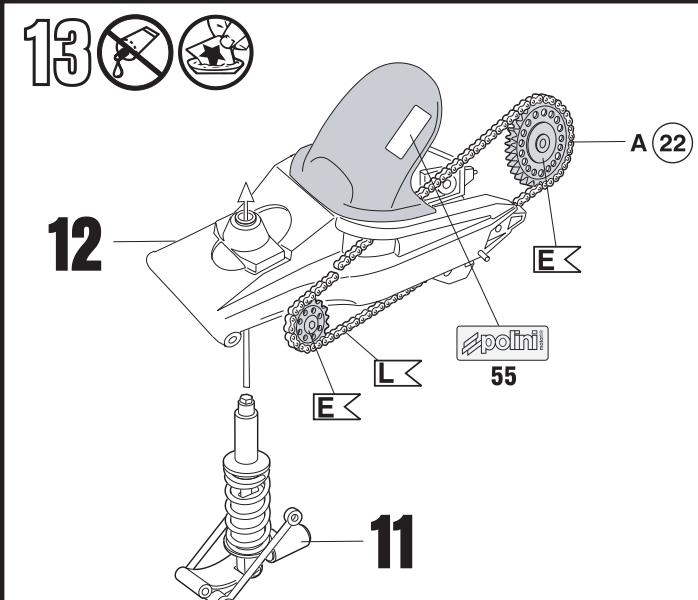

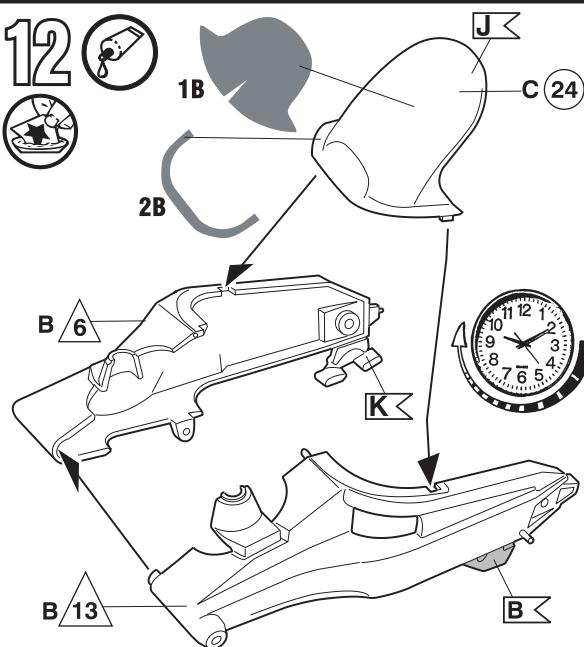

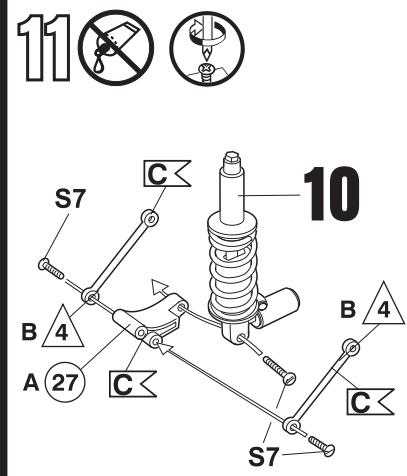

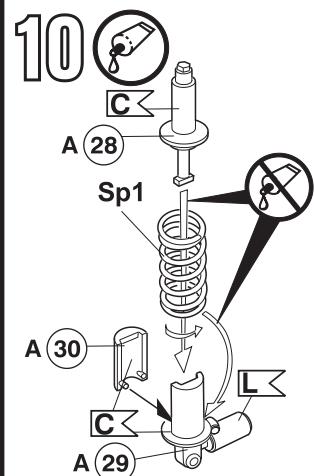

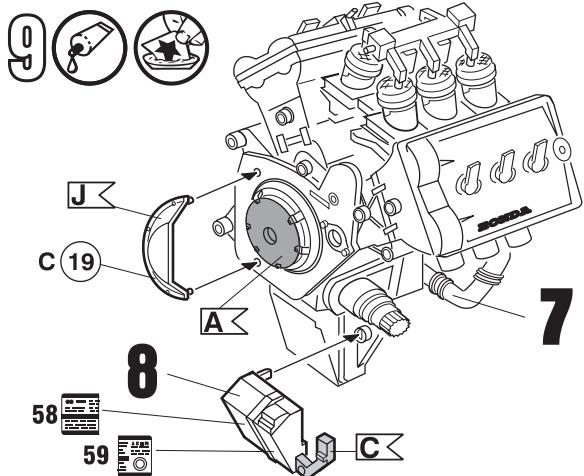

Thanks to his unusual driving style, this young and extremely talented rider was already making his mark on the world championship at his first appearance in the 125 cc class in 1996. By the following year he had become world champion in the 125 class, followed by a further world championship title in the 250 class in 1999 and 2001 in the then 500 class. This three times world champion who had conferred the name "the Doctor" on himself, ended the 2002 season the victor in no less than 11 out of 17 GP races. Again he battled to win the world championship rider's title. His team mate Tohru Ukawa also won the South Africa Grand Prix and thanks to these professional riders, Honda succeeded in winning the 2002 world championship constructor's title.
