

For Immediate Release: July 22, 2024

New! Factory Team RC8B4 Engine Mount Set

Factory Team engineers created a new CNC machined aluminum engine mount split design for the RC8B4 series of buggies and trucks. The new set comes with separate left and right upper aluminum mounts that key into the engine mount base. After assembling the engine onto the mount and into the vehicle, simply remove 4 socket head screws from the top of the base, and the engine and upper mounts will come out of the vehicle without having to move the base and affect the gear mesh.

Features:

- Split design allows for engine maintenance without re-setting gear mesh on the chassis.
- Engine removal screws re-located for easy tool access around the engine cooling head.
- CNC-machined, Factory Team blue anodized.
- Fits RC8B4.1, RC8B4, and RC8B3 nitro buggies.
- Fits RC8T4 and RC8T3 series nitro trucks.
