

60 Class
2-cycle engine

90 Class
4-cycle engine

Or Electric equivalent

CESSNA 188 AGWAGON

SEMI SCALE MODEL

INSTRUCTION MANUAL MONTAGEANLEITUNG

SPECIFICATIONS

Wingspan	1920mm
Length	1300mm
Electric Motor	1000 Watt (BOOST 90)
Glow Engine	.60 2-T / .90 4-T
Radio	6 Channel / 8 Servos

TECHNISCHE DATEN

Spannweiter	1920mm
Länge	1300mm
Elektroantrieb	1000 Watt (BOOST 90)
Verbrennerantrieb	10cc 2-T / 15cc 4-T
Fernsteuerung	6 Kanal / 8 Servos

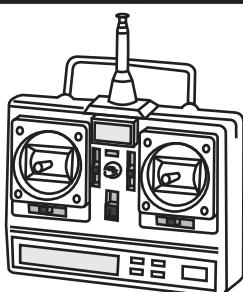

WARNING! This radio controlled model is NOT a toy. If modified or flown carelessly it could go out of control and cause serious human injury or property damage. Before flying your airplane, ensure the air field is spacious enough. Always fly it outdoors in safe areas and seek professional advice if you are unexperienced.

ACHTUNG! Dieses ferngesteuerte Modell ist KEIN Spielzeug! Es ist für fortgeschrittene Modellflugpiloten bestimmt, die ausreichende Erfahrung im Umgang mit derartigen Modellen besitzen. Bei unsachgemäßer Verwendung kann hoher Personen- und/oder Sachschaden entstehen. Fragen Sie in einem Modellbauverein in Ihrer Nähe um professionelle Unterstützung, wenn Sie Hilfe im Bau und Betrieb benötigen. Der Zusammenbau dieses Modells ist durch die vielen Abbildungen selbsterklärend und ist für fortgeschrittene, erfahrene Modellbauer bestimmt.

REQUIRED FOR OPERATION (Purchase separately)

BENÖTIGTE KOMPONENTEN (Nicht im Lieferumfang enthalten)

Minimum 6 channel radio
for airplane
Minimum 6 Kanal
Fernsteuerung

70mm Spinner

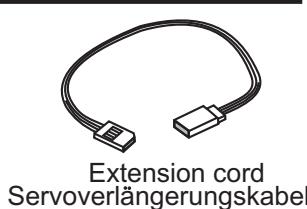

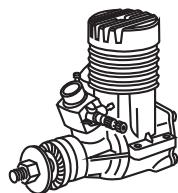

Brushless Motor
PICHLER BOOST 90

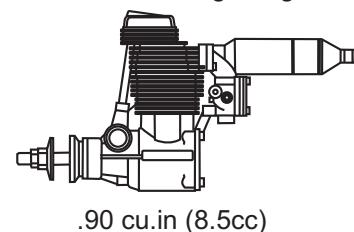

Brushless ESC

Brushless Regler

Battery / Flugakku LEMONRC 5300-22.2V .60 cu.in. (7.5cc)

Extension cord
Servoverlängerungskabel

.90 cu.in (8.5cc)

Cyanoacrylate Glue
Sekundenkleber

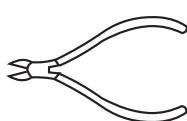

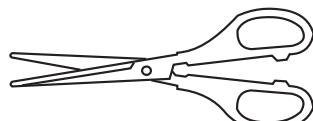

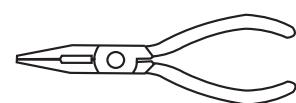

Silicon Glue
Silikonkleber

Epoxy Glue (30 minutes type)
Epoxy-Klebstoff (30min)

Tool Required/ Erforderliches Werkzeug

The pre-covered film on ARF kit may wrinkle due to variations of temperature.

Store model in a cool and dry place for awhile.

Then, starting with low heat, you may carefully use a hair dryer to smooth out wrinkles.

Die Bespannung des Modells kann durch Temperaturinflüsse erschlaffen oder Falten werfen z.B bei zu starker Sonnenenstrahlung oder Hitze.

Stellen Sie das Modell zunächst an einen kühlen Platz für eine bestimmte Zeit. Danach können Sie versuchen die restlichen Falten vorsichtig mit einem Haartrockner zu behandeln.

Drill holes using the stated size of drill
(in this case 1.5 mm Ø)

Take particular care here

Hatched-in areas:
remove covering film carefully

Check during assembly that these parts move freely, without binding

Use epoxy glue

Apply cyano glue

Assemble left and right sides the same way.

Not included.
These parts must be purchased separately

Löcher bohren mit dem angegebenen Bohrer (hier 1,5 mm)

Hier besonders aufpassen

Schraffierte Stellen,
Bespannfolie vorsichtig entfernen

Während des Zusammenbaus
immer prüfen, ob sich die Teile auch reibunglos bewegen lassen

Epoxy-Klebstoff verwenden

Sekundenkleber auftragen

Linke und rechte Seite wird gleichermaßen zusammengebaut

Nicht enthalten. Teile müssen separat gekauft werden.

CONVERSION TABLE

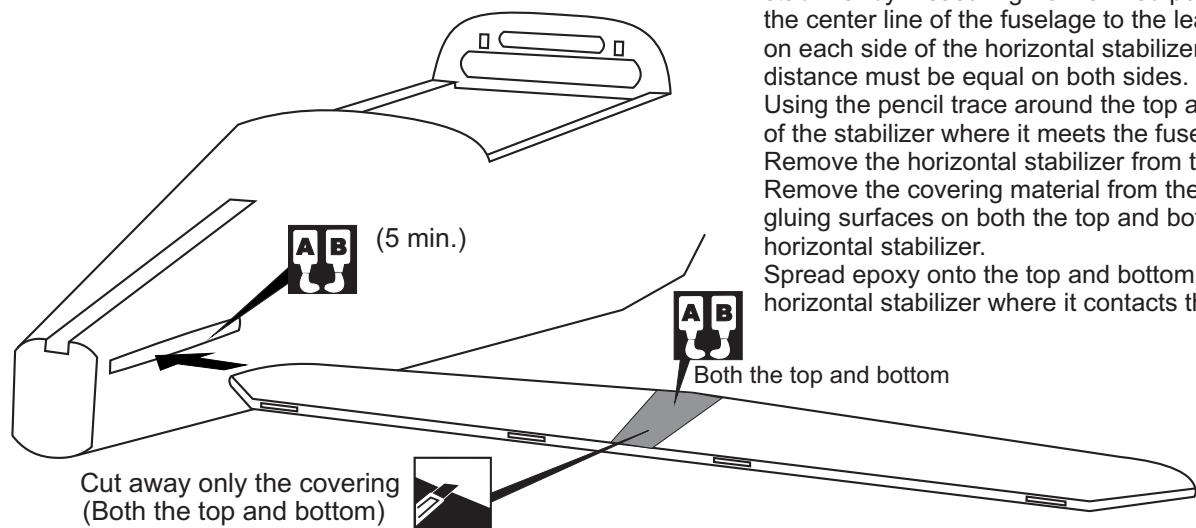

1.0mm = 3/64"
1.5mm = 1/16"
2.0mm = 5/64"
2.5mm = 3/32"

3.0mm = 1/8"
4.0mm = 5/32"
5.0mm = 13/64"
6.0mm = 15/64"

10mm = 13/32"
12mm = 15/32"
15mm = 19/32"
20mm = 51/64"

25mm = 1"
30mm = 1-3/16"
45mm = 1-51/64"

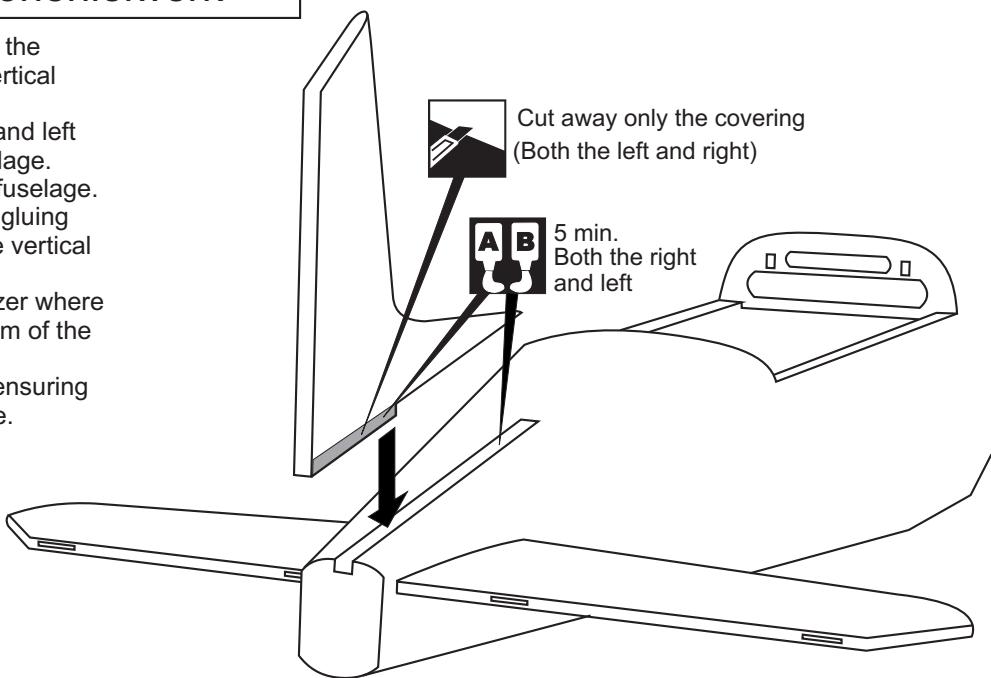

1- Horizontal Stabilizer / Höhenruder

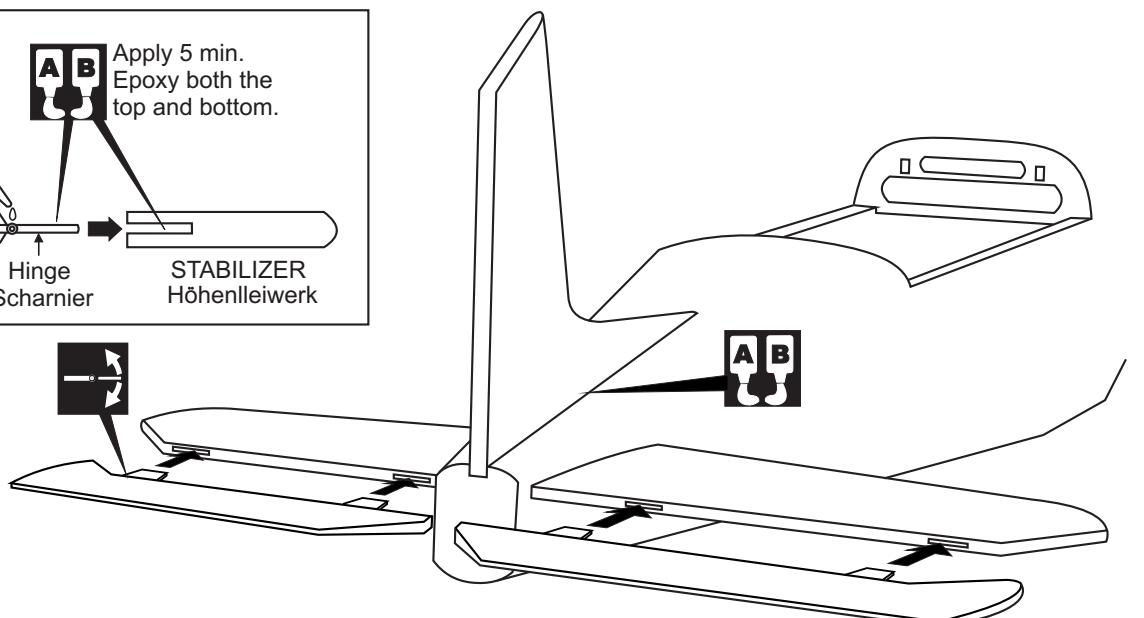

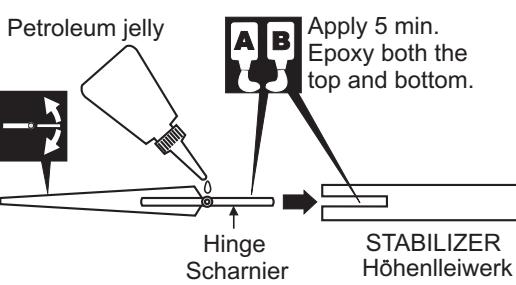

Trial fit the horizontal stabilizer in place on the fuselage. Check the alignment of the horizontal stabilizer by measuring from a fixed point along the center line of the fuselage to the leading edge on each side of the horizontal stabilizer. The distance must be equal on both sides.
Using the pencil trace around the top and bottom of the stabilizer where it meets the fuselage.
Remove the horizontal stabilizer from the fuselage
Remove the covering material from the gluing surfaces on both the top and bottom of the horizontal stabilizer.
Spread epoxy onto the top and bottom of the horizontal stabilizer where it contacts the fuselage.

2- Vertical Stabilizer / Höhenleiwerk

Trial fit the vertical stabilizer in place on the fuselage. Check the alignment of the vertical stabilizer.
Using the pencil trace around the right and left of the stabilizer where it meets the fuselage.
Remove the vertical stabilizer from the fuselage.
Remove the covering material from the gluing surfaces on both the right and left of the vertical stabilizer.
Spread the epoxy on the vertical stabilizer where it contacts the fuselage and to the bottom of the stabilizer.
Insert the vertical fin into the fuselage, ensuring that it is seated properly on the fuselage.

3- Elevator / Höhenruder

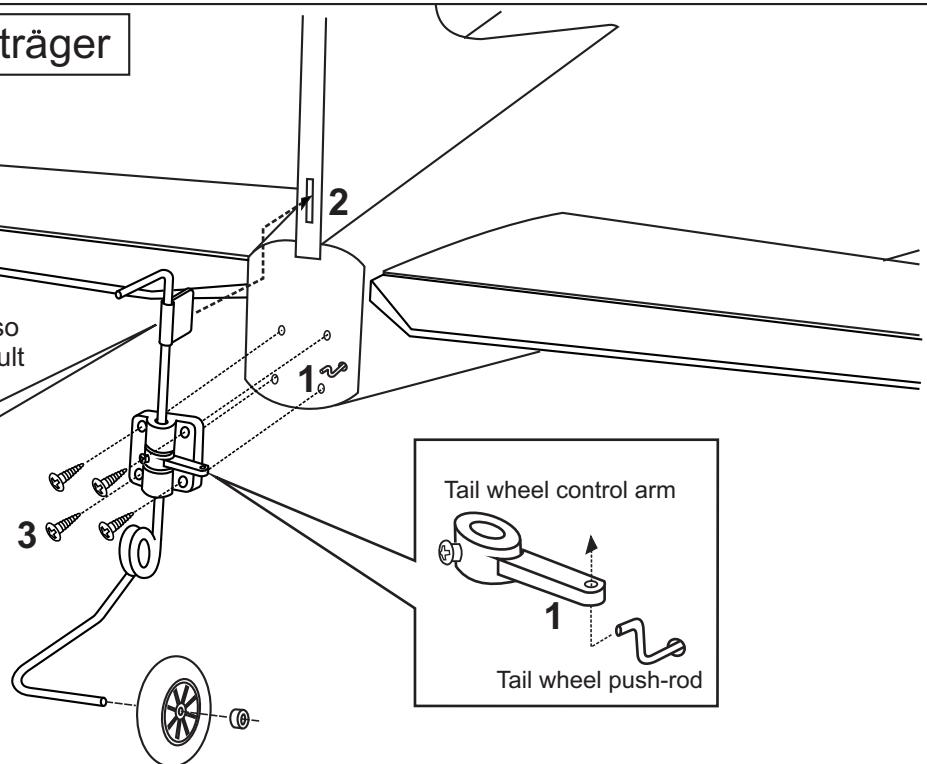

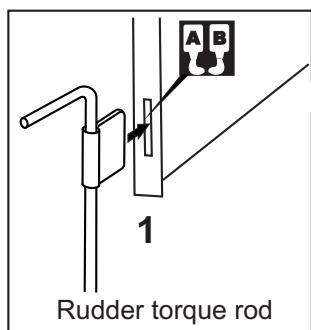

4- Tail wheel leg / Spornradträger

3x12mm screw

.....4

Test-fit the rudder torque rod into the slot.

NOTE: You may need to open up the slots so that the torque rod bearing are not too difficult to push in

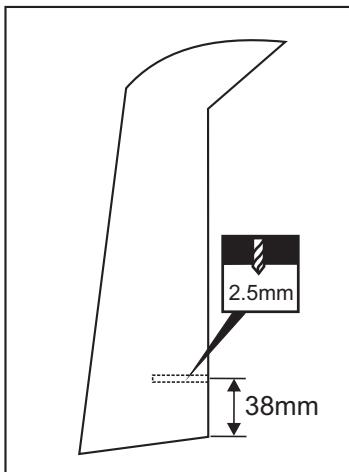

1- Insert the tail wheel pushrod into the hole on the tail wheel control arm (as show).

2- Re-install the rudder torque rod and tail wheel mount in place.

3- Secure the tail wheel mount in place using four 3x12mm screws.

Secure the tail wheel control horn in place using a 1/8"(3mm) screw set, Ensure smooth non-binding movement.

5- Rudder / Höhenleitwerk

Drill a 3/32"(2.5mm) diameter hole in torque rod mounting slot, marking sure that you drill the hole perpendicular to the leading edge of the rudder.

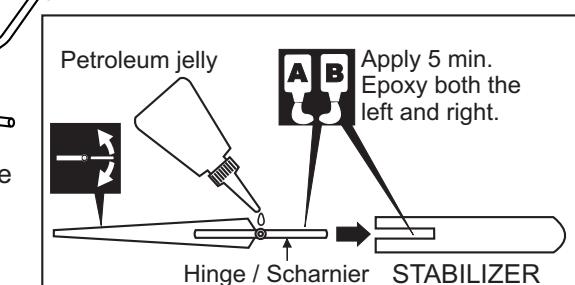

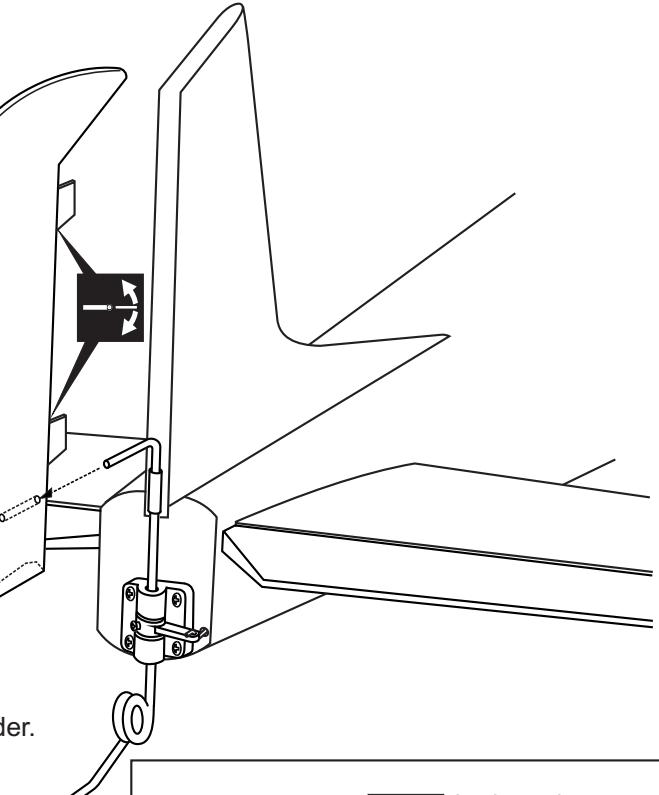

Position each hole 38mm (+/- 1mm) out from the edge of the rudder.

Test-fit the torque rod into the rudder.

When satisfied with the fit and alignment, remove the torque rod.

Apply a thin layer of petroleum jelly to only the pivot point of the torque rod bearing

Hinge the rudder to the vertical stabilizer, using 5 minute epoxy. Make sure to apply a thin layer of epoxy to the left and right of both hinges and to the inside the torque rod mounting slot and to the end of the torque rod itself.

6- Main landing gear / Fahrwerk

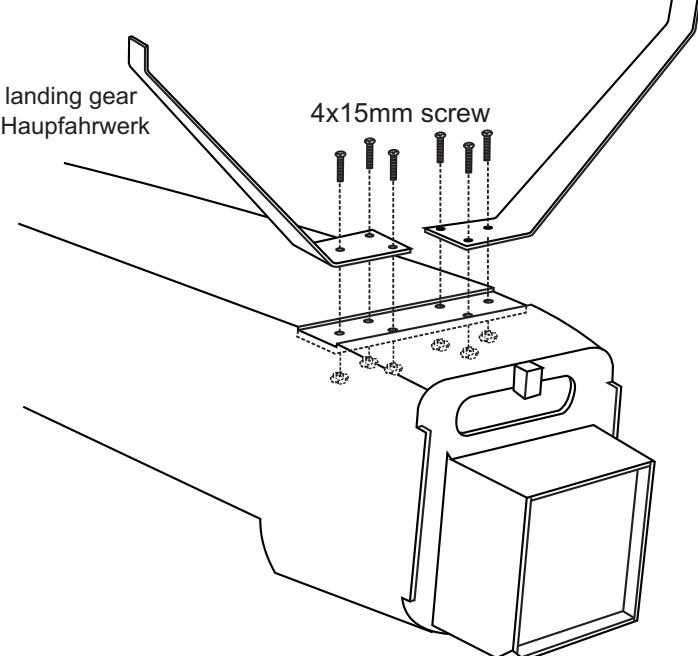

4X15mm screw

.....6

Aluminum landing gear
Aluminum Haupfahrwerk

4x15mm screw

7- Wheel / Radl

4X30mm screw

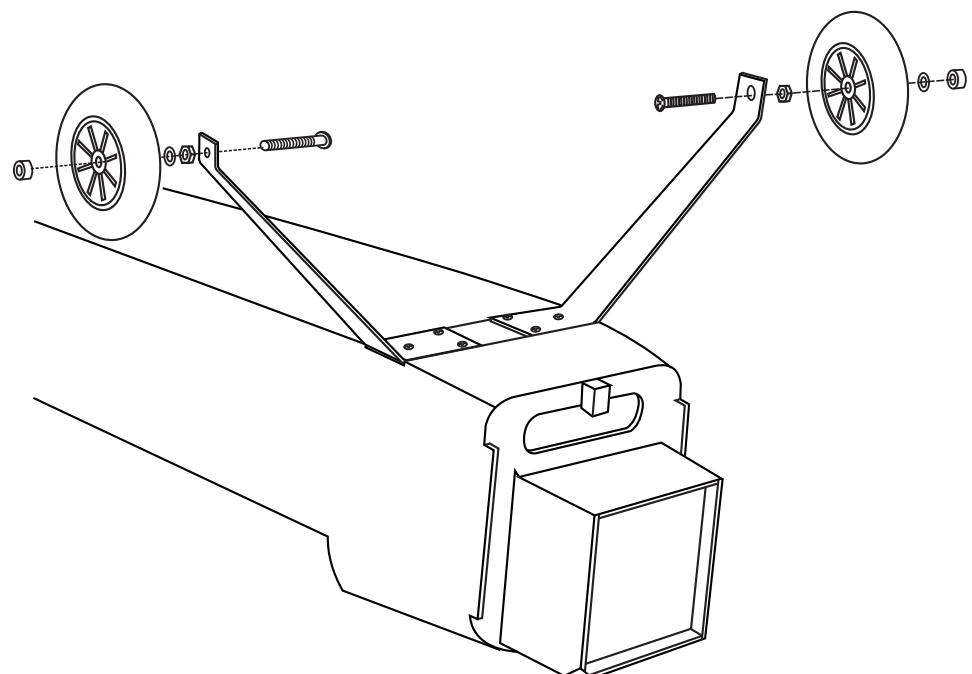

.....2

.....2

.....2

.....2

8- Engine mount / Motorträger

4X25mm screw

.....4

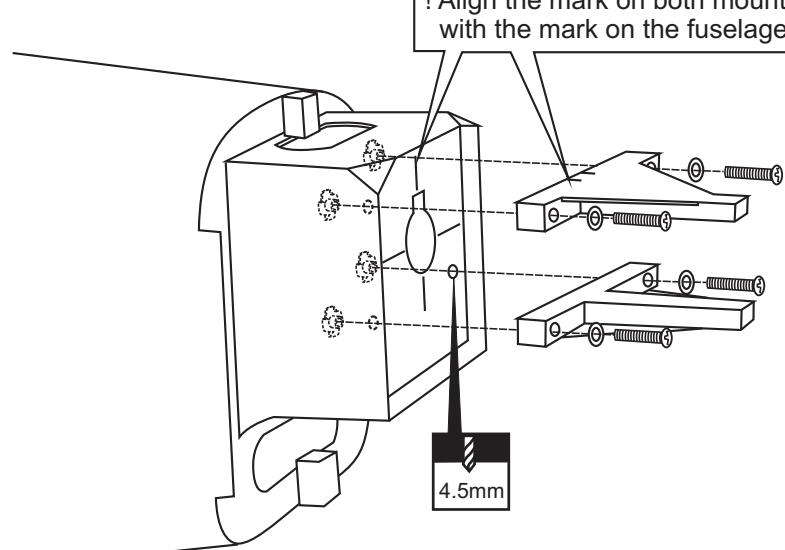

.....4

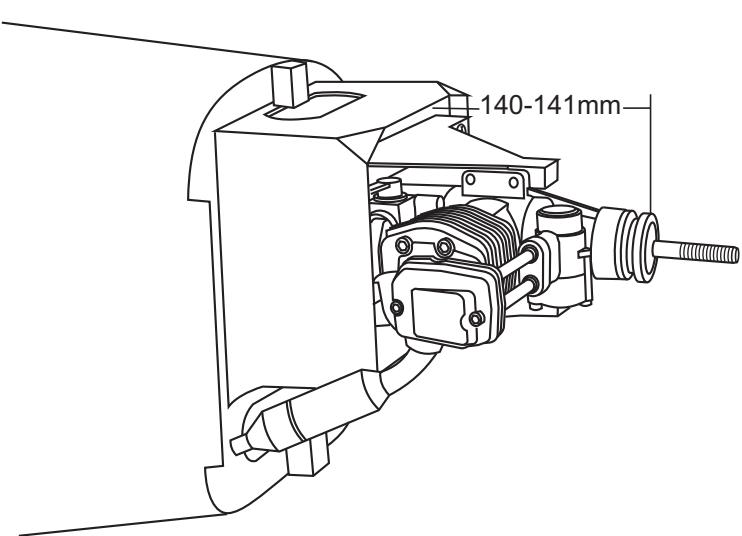

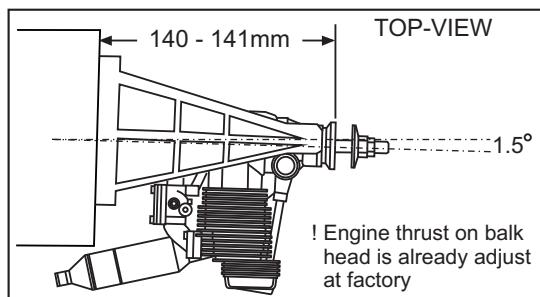

.....4

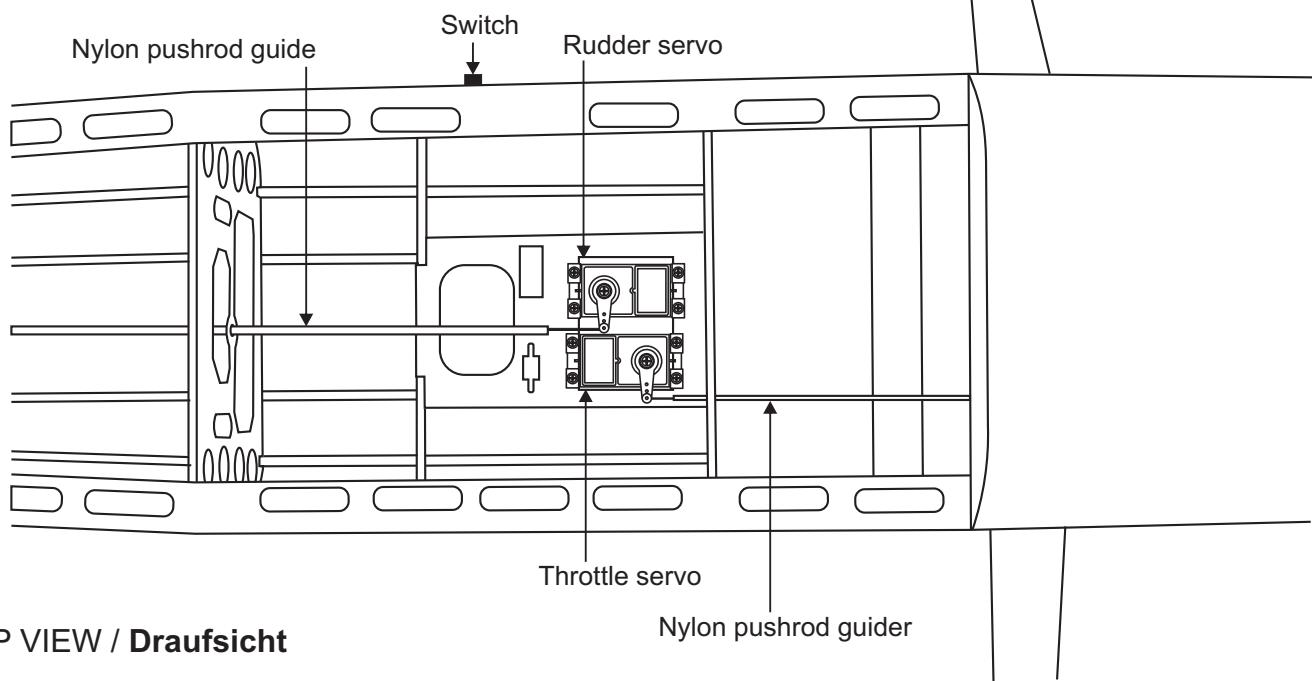

! Align the mark on both mounts with the mark on the fuselage

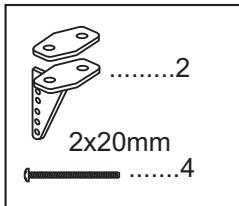

9- Engine / Motor

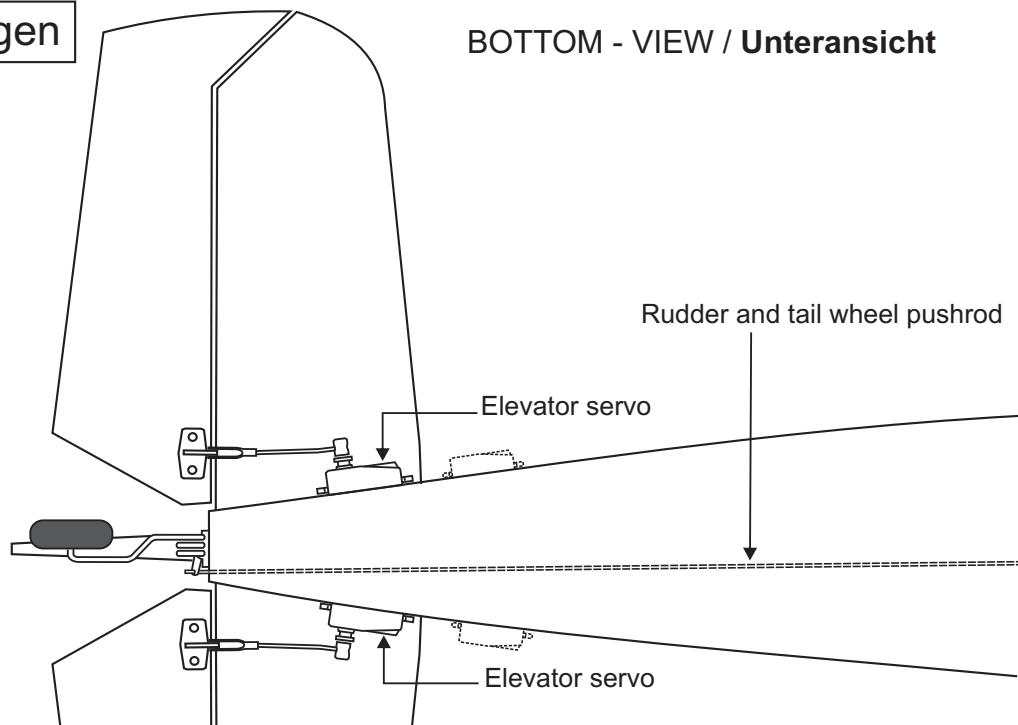

10- Servo installation

11- Linkage / Alenkungen

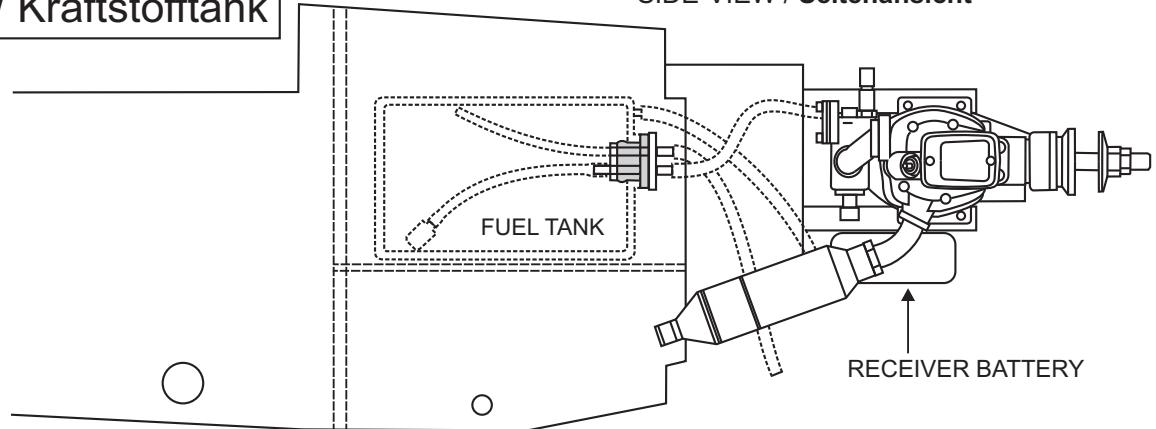

BOTTOM - VIEW / Unteransicht

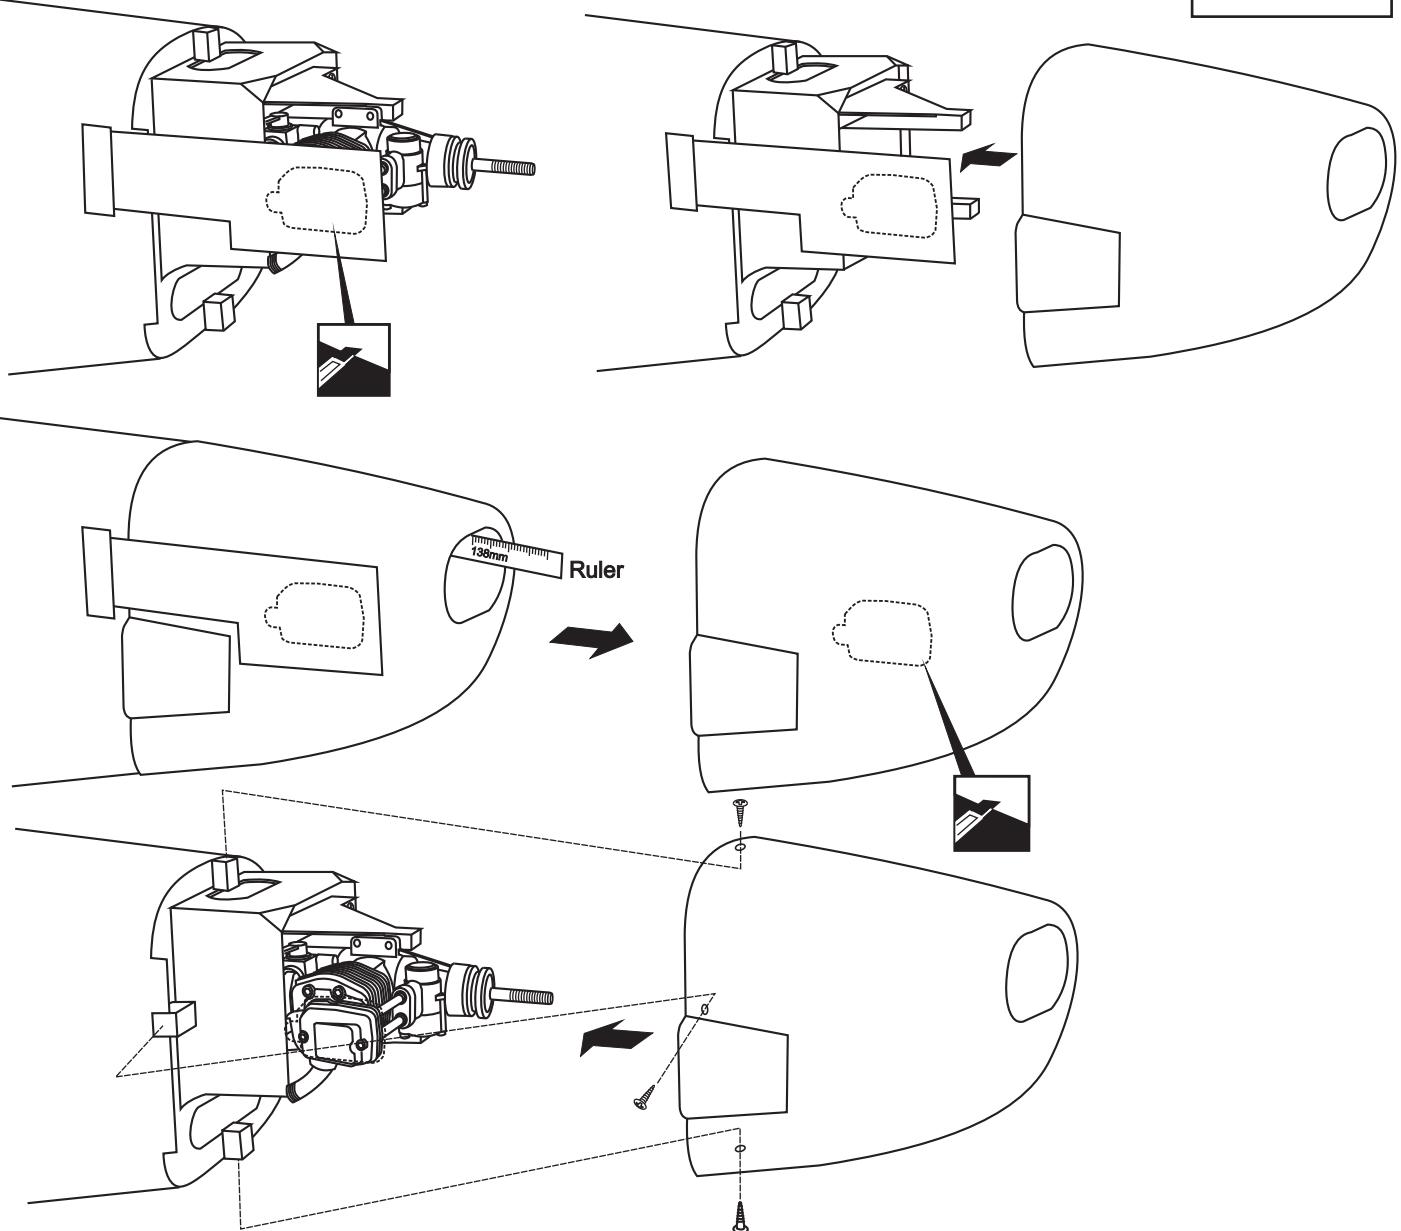

12- Fuel tank / Kraftstofftank

SIDE-VIEW / Seitenansicht

13- Cowling / Motorhaube

2.5x10mm.....4

Attach the board or transparent plastic on the side of the fuselage with the adhesive tape as show.

Using a pencil or felt tipped pen trace around the engine head where it meet the cowl. Cut the opening the board or transparent plastic for the engine head as marked above.

Remove the engine and insert the cowl on to the fuselage so the distance from the fire wall to the front of the cowl is 138 to 139mm.

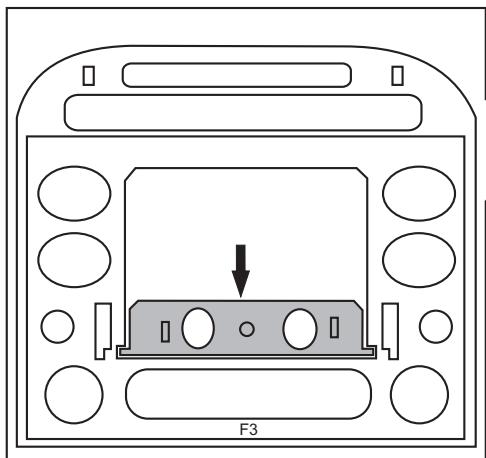

Remove the cowl from the fuselage and carefully cut the opening for the engine head as marked above. Do the same way with the hole for needle-valve and silencer.

Again. Insert the cowl on to the fuselage and secure it in place with five 2x5mm screws.

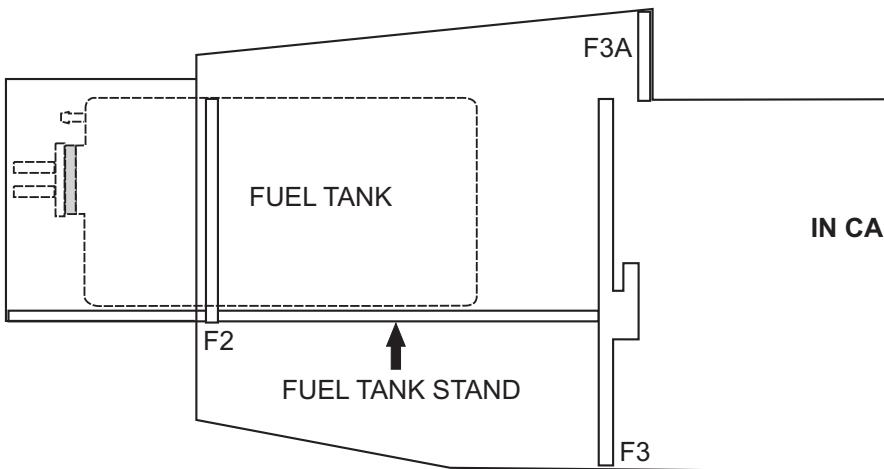

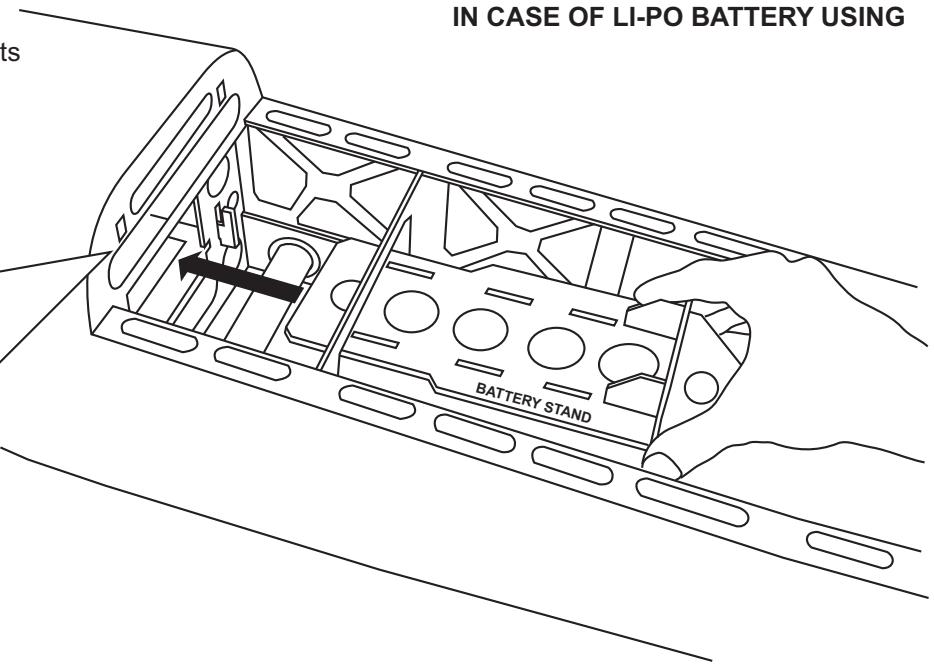

14- Li-po battery / Li-po akku

Slide the battery stand throughout the slots on the bottom of F3

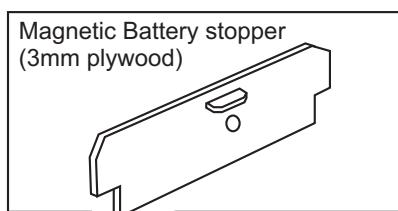

One end of the battery stand touched the rear of the fire-wall

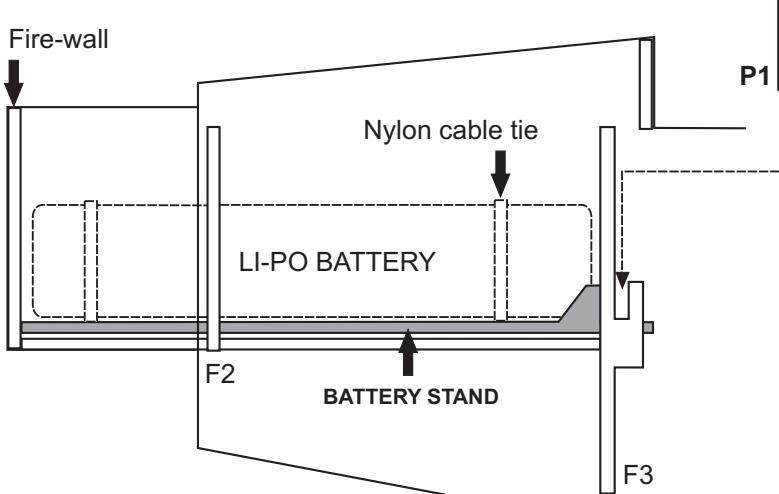

IN CASE OF LI-PO BATTERY USING

IN CASE OF GLOW ENGINE USING

SIDE-VIEW / Seitenansicht

Place the Li-po battery on to the battery stand and secure it in place with the nylon cable tie.

Slide the battery stand (P1) throughout the slots on the bottom of F3 so that the end of the battery stand touched the rear of the fire-wall.

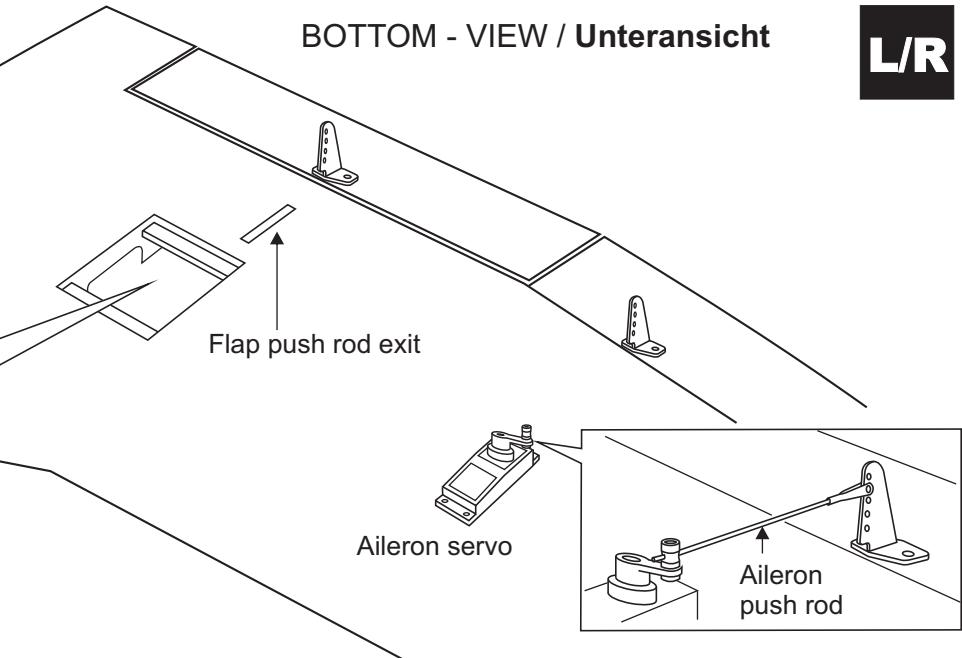

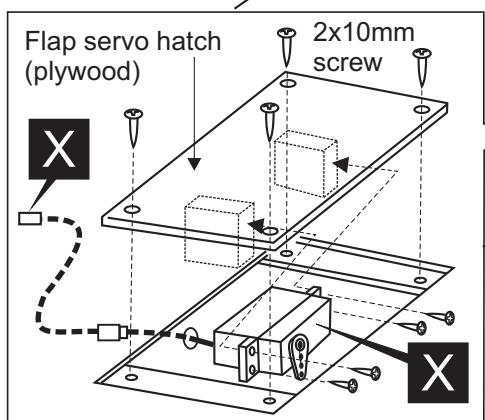

Secure the battery stand in place using the magnetic battery stopper (P4).

IN CASE OF ELECTRIC MOTOR USING

15- Servo

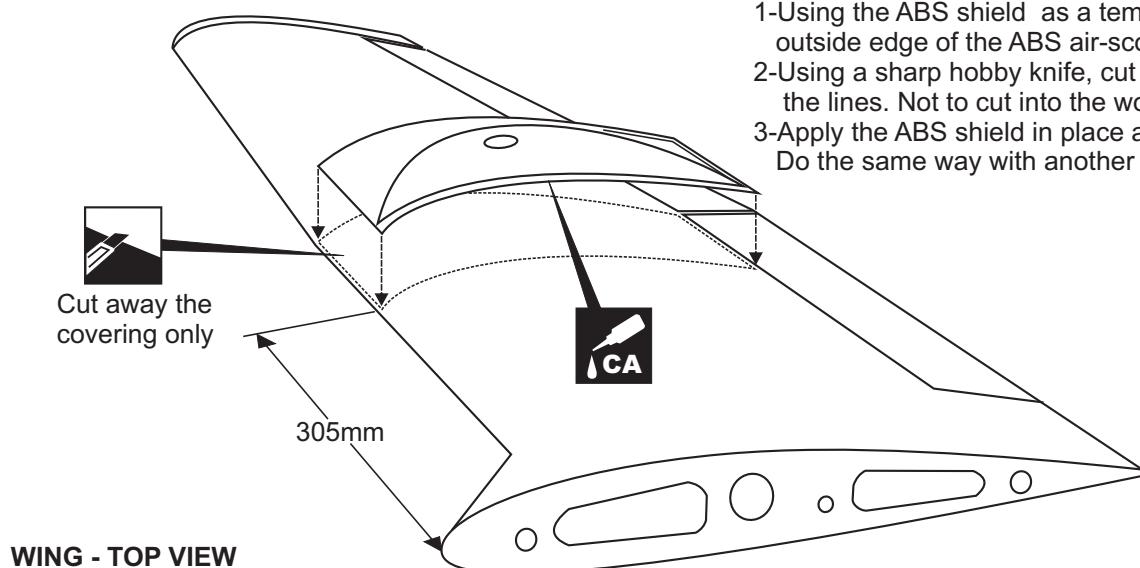

BOTTOM - VIEW / Unteransicht

L/R

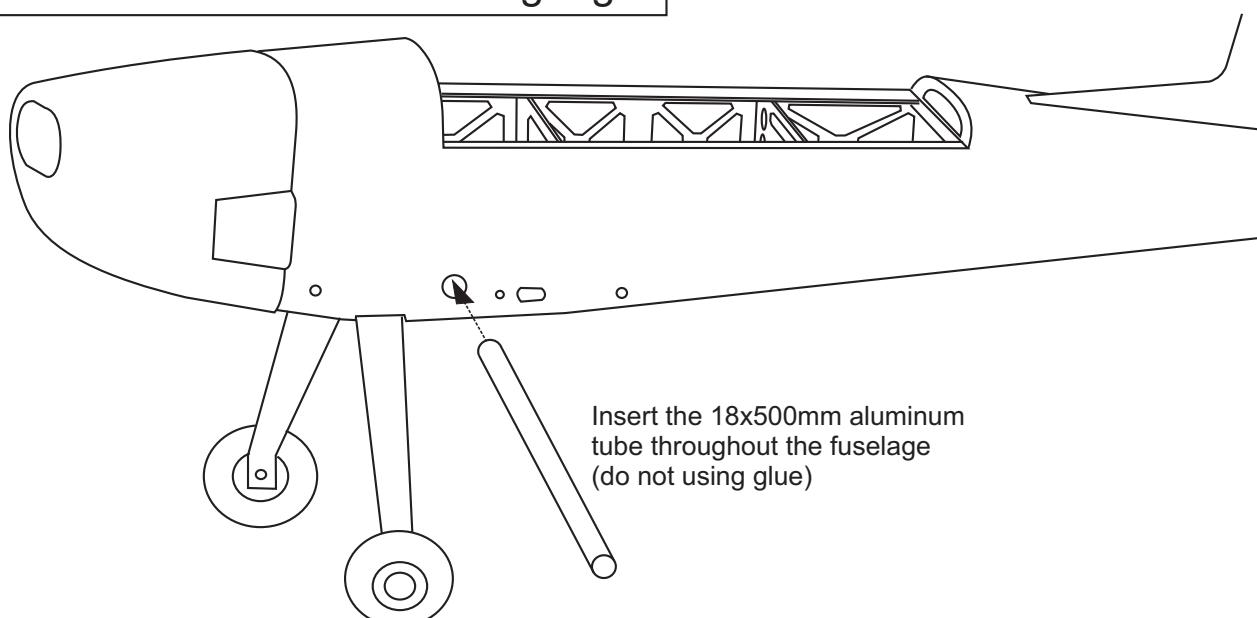

16- ABS Shield

- 1-Using the ABS shield as a template, trace around the outside edge of the ABS air-scoop, and then remove it.
- 2-Using a sharp hobby knife, cut away the covering inside the lines. Not to cut into the wood.
- 3-Apply the ABS shield in place and secure with CA glue. Do the same way with another half wing.

17- Wing installation / Flächenbefestigung

18- Wing installation / Flächenbefestigung

5X20mm screw

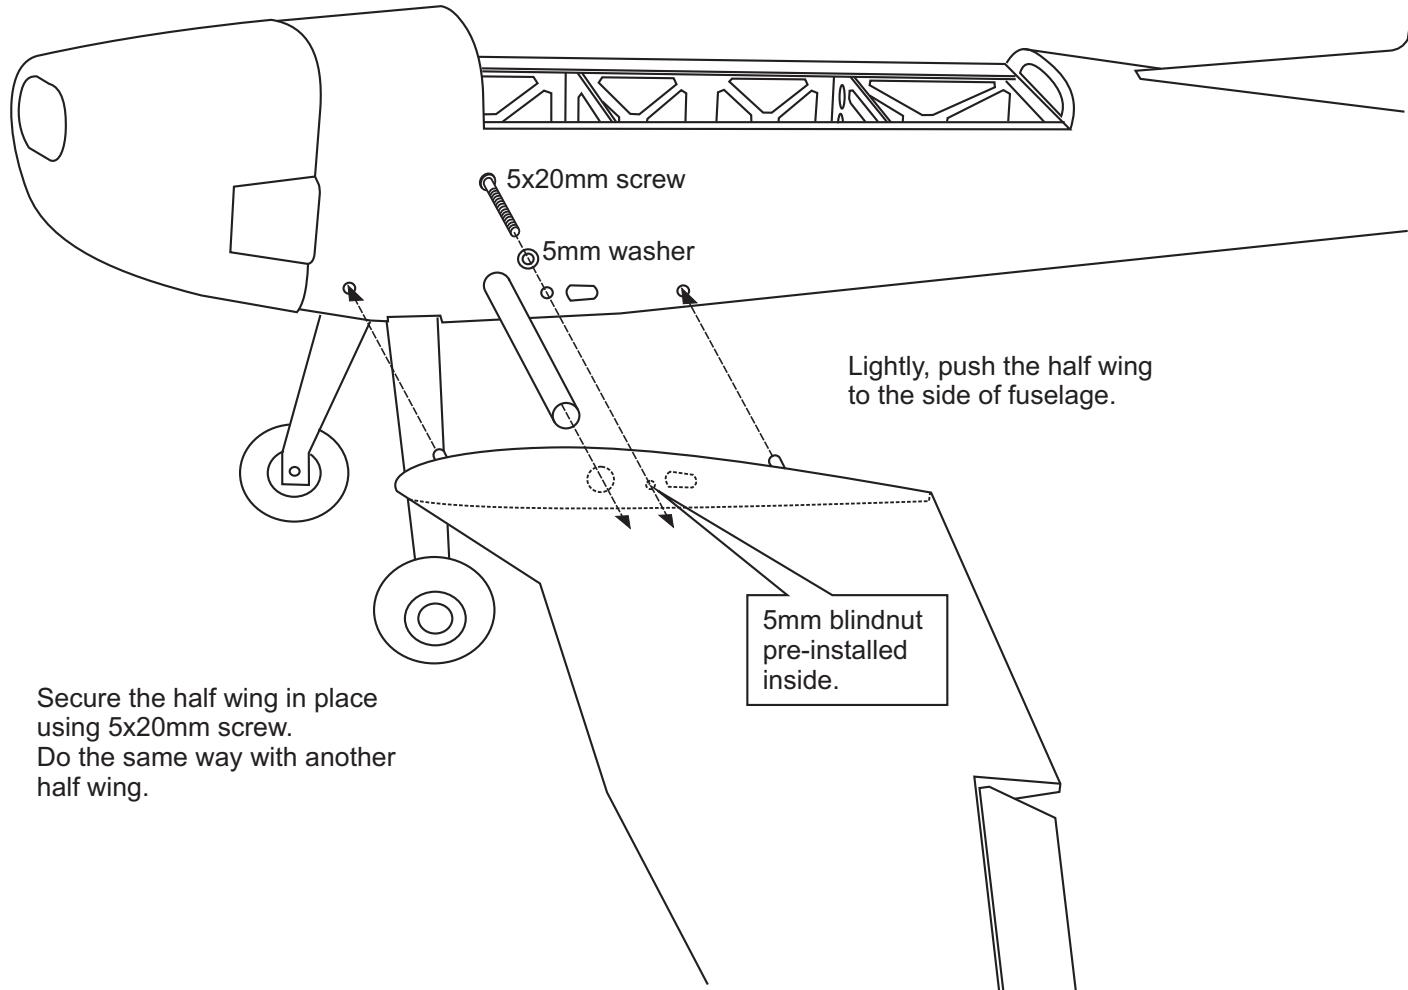

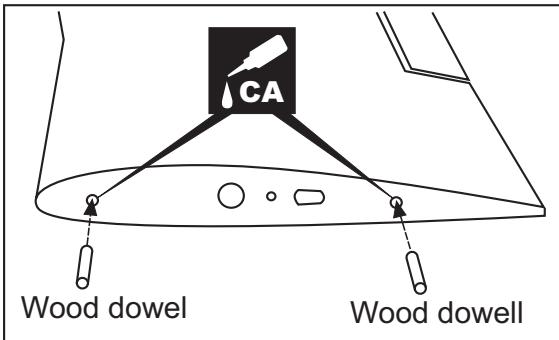

2

2

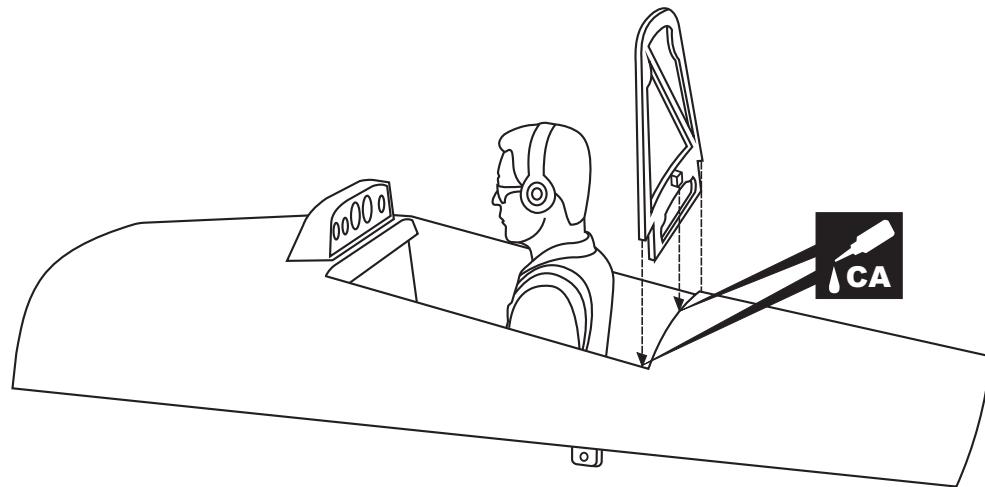

1- Test-fit the dowel into the hole.

2- Secure the dowel in place
using CA glue.

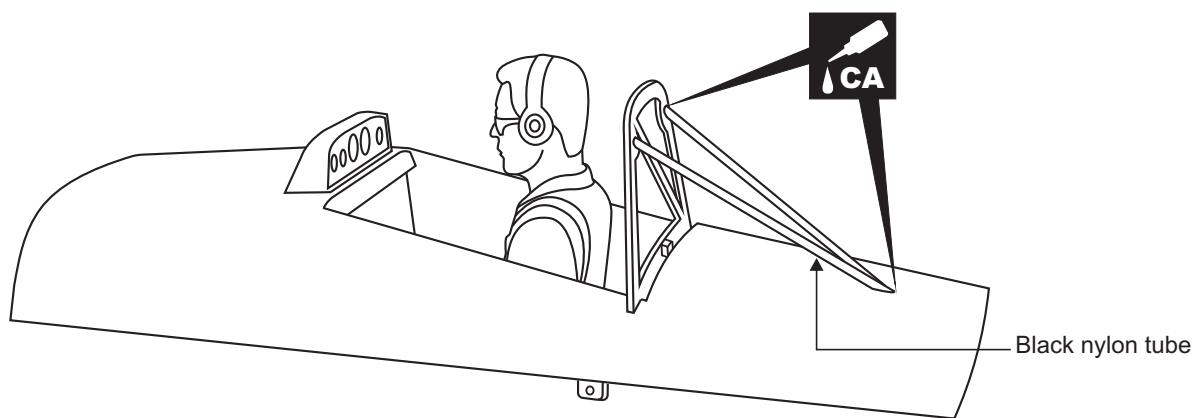

Do the same way with another
half wing.

19- Cockpit

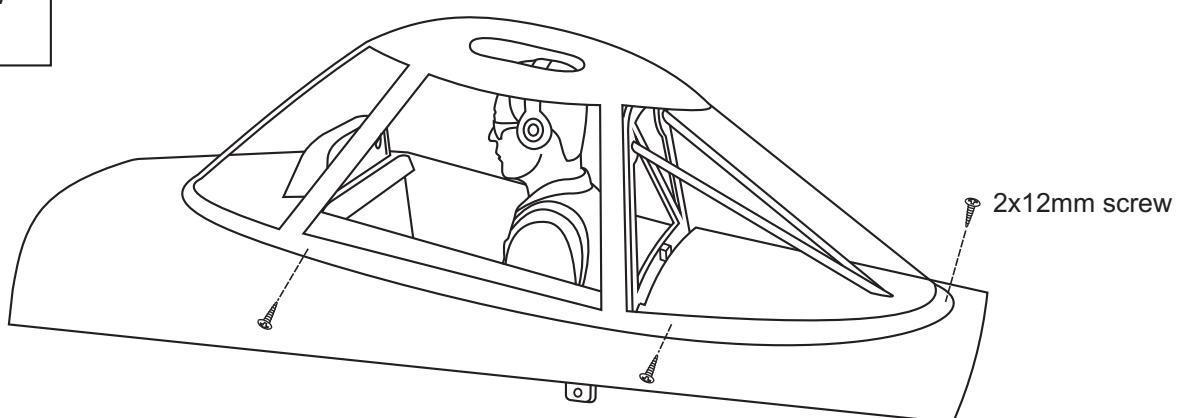

20- Cockpit

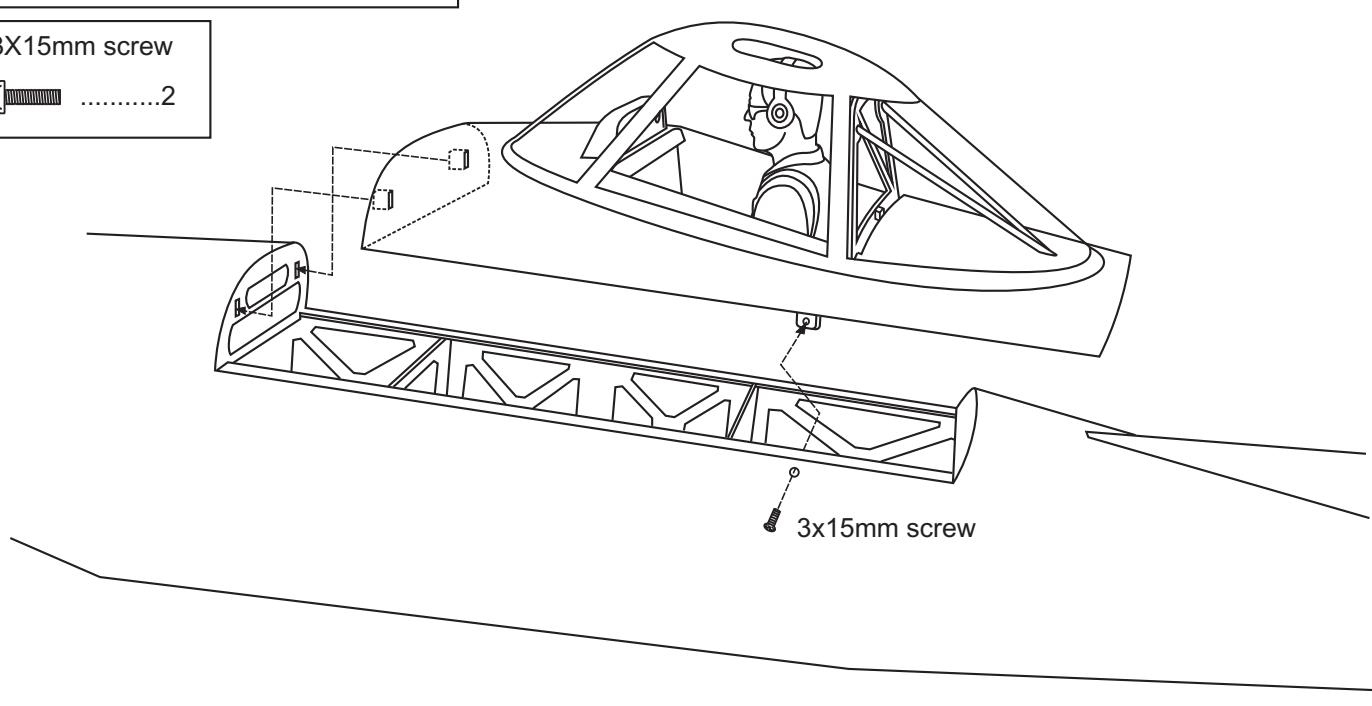

21- Canopy / Kabinenhaube

2x12mm screw
.....5

22- Cockpit installation

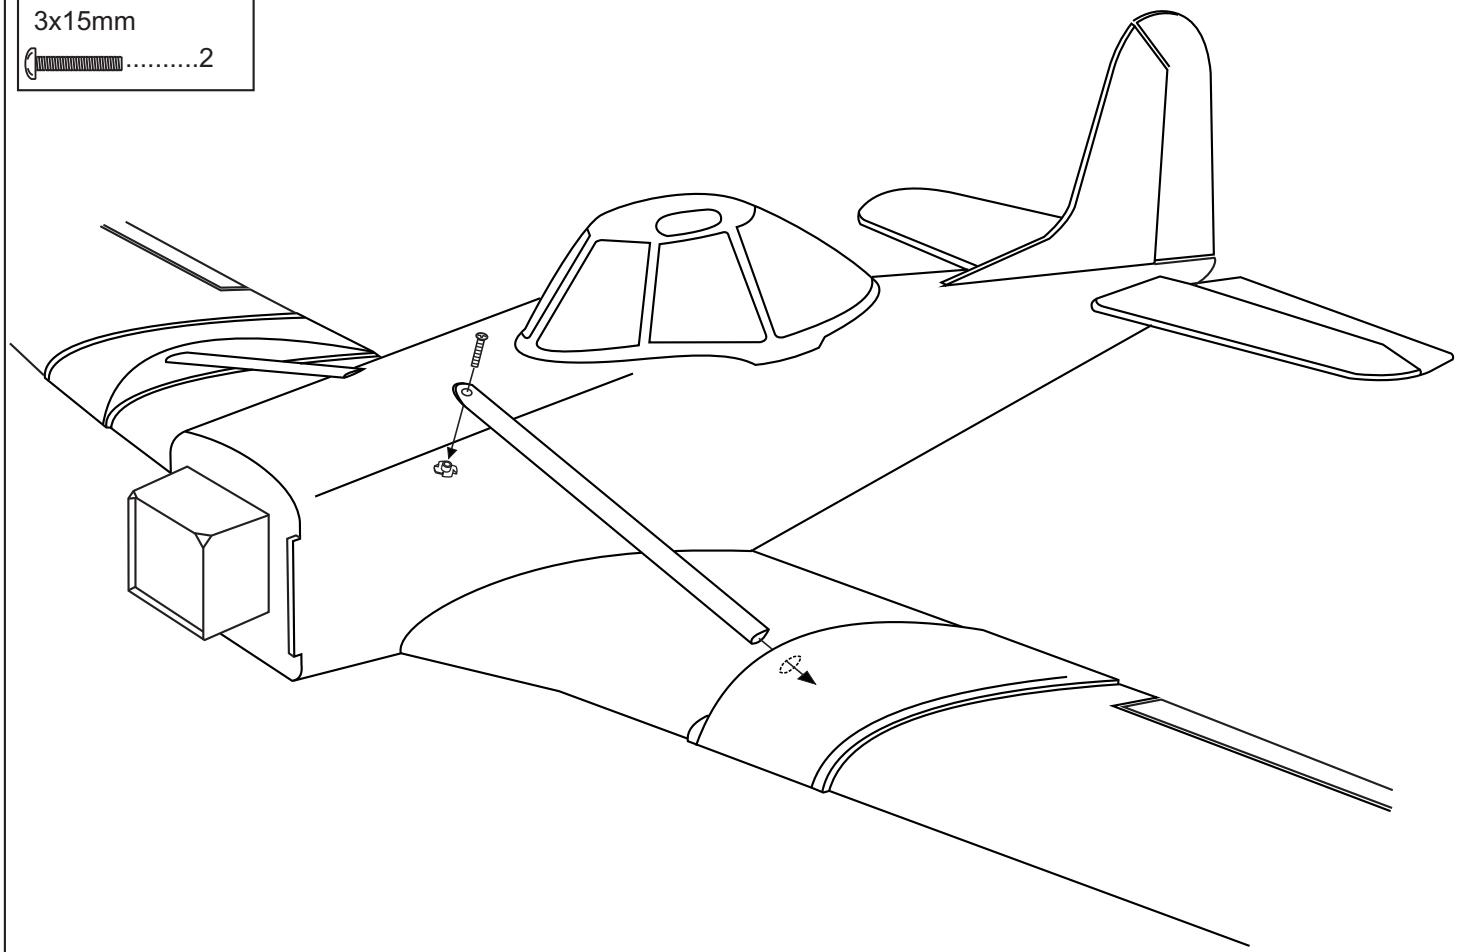

3X15mm screw
.....2

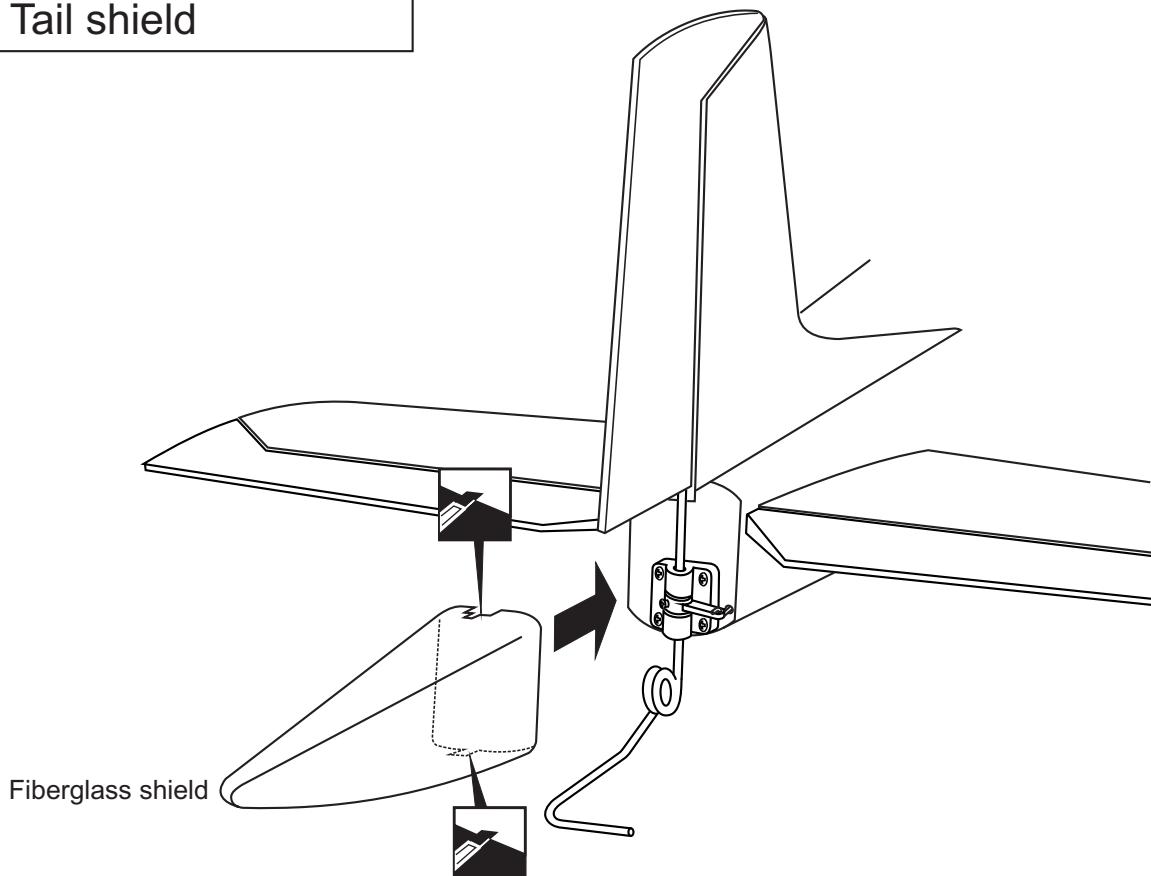

23- Wing brace

3x15mm

2

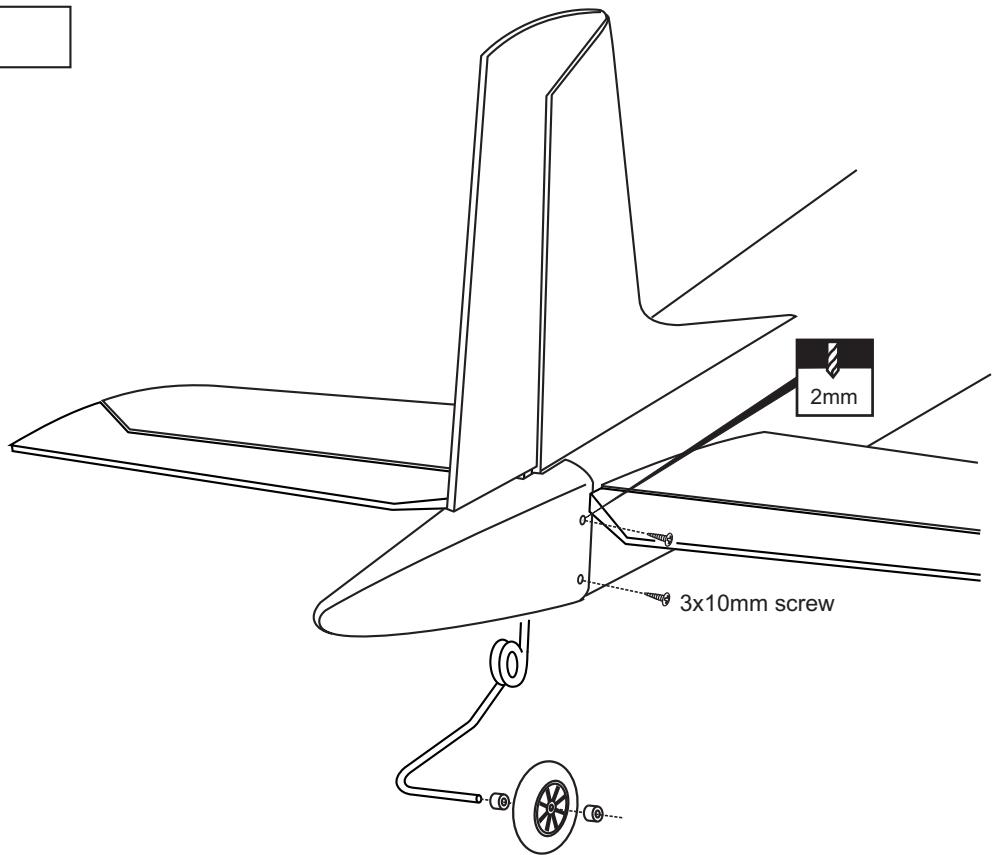

24- Tail shield

25- Tail shield

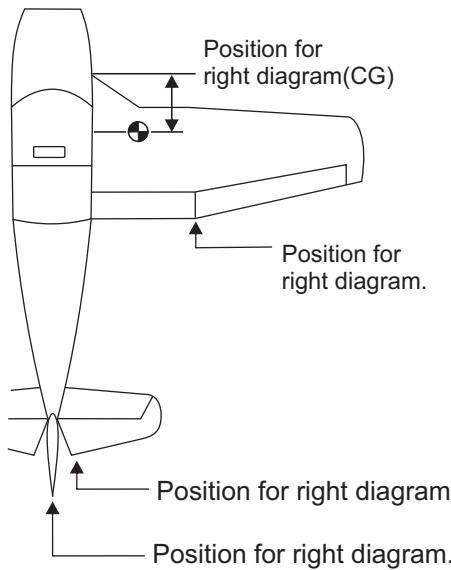

3x10mm screw

.....4

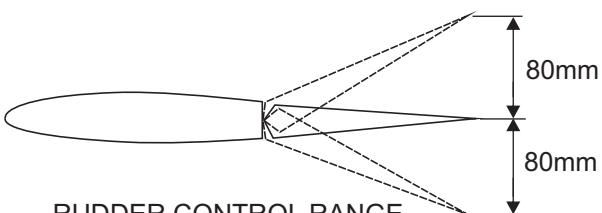

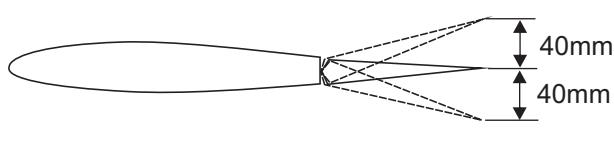

26- Control surface & Balance Schwerpunkt & Ruderausschläge

Adjust the travel of each control surface to the values in the diagrams these values fit general flight capabilities. Readjust according to your needs and flight level.

NEVER FLY BEFORE CHECKING THE CG'S REQUIRED POSITION.

ELEVATOR CONTROL RANGE

RUDDER CONTROL RANGE

Shift the location of the battery pack as needed to obtain the specification.

Carefully install the battery pack to ensure that they will not shift during flight.

IMPORTANT: Please do not clean your model with pure alcohol, only use liquid soap with water or use glass cleaner to clean on surface of your model to keep the colour not fade.
