# 1/10 Scale Crawler Body

# MARAUDER

Can be used with Axial SCX10 Chassis  
(Long Wheelbase: 313mm Width: 220mm)

MARAUDER — P01-P10

WARRIOR — P11-P18

MITSUBISHI PAJERO evo 1998 /  
MITSUBISHI PAJERO evo "Mitsubishi Oil"  
1998 Dakar Rally — P19-P24

FURIOUS ANGEL — P25-P28

Alfa Romeo 155 GTA — P29

Alfa Romeo 75 Turbo Evoluzione — P30

Lancia Delta HF Integrale 16V — P31

Lancia Beta Montecarlo  
(1981LM & 1979 Giro d'Italia) — P32

Lancia LC2 — P33-P34

1/10 Garage Series — P35-P38

Chassis for Display Series — P39

Upgrade Parts for 1/10 RC Car — P40-P43

Upgrade Parts for 1/10 RC Touring Car  
— P44-P45

Upgrade Parts for 1/10 RC Truck — P46

Killerbody's inspiration for MARAUDER originated from Land Rover Defender. As we know that it stands for tough, intrepid, mastering all manner of terrain, it couldn't be more suitable to apply it in rock crawler. The difficulty during the development of MARAUDER lied in the structure design. It was a huge challenge for Killerbody's development and design team to satisfy the classic and tough appearance with vacuum forming technology, which would be unprecedented in history. Finally, Killerbody successfully reproduced this body with our rich experience in body shell design and manufacturing. We believe that you will agree with our design philosophy if you see or touch the MARAUDER.

Undoubtedly, Killerbody's consistent expression techniques of details can be found in many aspects, including cockpit, metal net, special roll bar, roof rack and enhanced light. What's more important is that we are not only working on the appearance, because this body has exceeded the ordinary RC body in many aspects, such as appearance design, structure design, and the complexity of production materials, etc. In addition, we also take its practicability into consideration. The tote box is used for balancing the weight of the climbing car by putting useful accessories in it and laying the box in the truck bed, thus maintaining the gravity when passing through undulant slopes and greatly improving the car performance.

People may say that the intensity of Polycarbonate body shell is not as good as that of hard plastic body shell. Don't worry.

Killerbody have thought about that already, and Plastic Body Reinforcing Plate has been tailored particularly for it to solve the intensity problem of body shell. Moreover, other upgraded accessories are very powerful as well. Now, you can start your adventurous journey with MARAUDER!

# 1/10 Scale Crawler Body WARRIOR

The Warrior was no doubt inspired by the old Jeep during the World War II. But fans know that the real prototype is M151 MUTT that in 1953 developed by the Ford Motor Company and the U.S. Army. It looked small, compact, rugged, cassette load-carrying structure. These features allowed it to outperform all other submitted replacement vehicles for the ageing jeep. And it is widely used in the Korean and Vietnam Wars.

Killerbody reproduced this cassette load-carrying structure, and the actual effect is very good, we just make how to reproduce this structure and make it like the real appearance. 1.5MM thick PC material is reasonable allocated to the front, middle, and rear part of this car, and the concave-convex in balance design which not only like the real chair structure, but also make the strength of the whole body shell not lose to any other hard plastic body shell, what's important is don't forget it use PC material. And like Marauder, Killerbody prepare special anti-rolle bar, many related details and upgrade parts, such as luggage rack, accent light, jerry can, roof tent, installation parts for spare tire and so on. People who like the crawler now can drive a Warrior to fight, or when you see Warrior, it can inspire you brave fight hearts.

1998 Dakar Rally - #204 KAHINOZUKA A+/H.MAGNE O+

### 1/10 BODY SHELL

Fit for Traxxas 1/10 Telluride 4X4 Truck  
Fit for Tamiya 1/10 HILUX HIGH-LIFT 4X4 Truck

Mitsubishi Pajero is a sport-utility vehicle developed and manufactured by Mitsubishi Motors. In 1997, Mitsubishi launched a special road car to celebrate their Dakar rally success, called the Pajero Evolution, it was to form the basis for the 1998 Mitsubishi Dakar rally effort. In the same year, Jean-Pierre Fontenay, driving a Mitsubishi Pajero EVO, won the Paris-Dakar Rally.

Killerbody developed this product to reproduce this classic car, believing that people who love Dakar Rally will like this classic car, which fit for two special chassis of Traxxas 1/10 Telluride 4X4 Truck and Tamiya 1/10 HILUX HIGH-LIFT 4X4 Truck. Besides Killerbody's consistent adherence to the original products, the disassembling method used in the front and rear bumpers makes it looks more authentic with a stronger tactile impression. The rear wing made of piecemeal plastic parts, regardless of the cost, enhances the sense of reality. Besides, the bracket of rear light is made into ABS plastic frames. All these characteristics has reproduced the MITSUBISHI PAJERO EVO 1998 vividly and incisively.

Meanwhile, we launched many upgraded parts for this body. Killerbody's product design philosophy is to make the upgrade parts useful to as many products as possible, rather than only used on a single product. If you have paid attention to our products before, now you will gradually find that some of our previous upgraded parts seem to be designed ahead of time for our current bodies, and this is the in-advance design of Killerbody.
