CHARGE
CAR BATTERY

IMPORTANT: Your GROM battery should not be left fully charged or fully discharged for extended periods of time.

The battery will take approximately 1 hour to charge prior to first use - if you intend to use the vehicle immediately after build completion, aim to put the battery on charge one hour before completion.

If the vehicle has been run to it's Low Voltage Cutoff then the battery should be placed on charge using the included charger for approximately 30 minutes to return the battery voltage to a suitable level before storage. Failure to do so could damage the battery.

DE

AUTOBATTERIEN
LADEN

WICHTIG: Ihr GROM-Akku sollte über längere Zeit weder vollständig geladen noch vollständig entladen gelagert werden.

Der Akku benötigt vor der ersten Verwendung etwa 1 Stunde Ladezeit – wenn Sie beabsichtigen, das Fahrzeug unmittelbar nach Abschluss des Aufbaus zu benutzen, laden Sie den Akku etwa eine Stunde vor Fertigstellung.

Wurde das Fahrzeug bis zur Unterspannungsabschaltung betrieben, sollte der Akku mit dem mitgelieferten Ladegerät etwa 30 Minuten lang geladen werden, um die Akkuspannung vor der Lagerung wieder auf ein geeignetes Niveau zu bringen. Die Nichtbeachtung kann den Akku beschädigen.

FR

CHARGER LES
BATTERIES DE VOITURE

IMPORTANT : Votre batterie GROM ne doit pas être laissée complètement chargée ni complètement déchargée pendant de longues périodes.

La batterie nécessite environ 1 heure de charge avant la première utilisation – si vous prévoyez d'utiliser le véhicule immédiatement après la fin du montage, mettez la batterie en charge environ une heure avant la fin de l'assemblage.

Si le véhicule a été utilisé jusqu'à la coupure basse tension, la batterie doit être mise en charge avec le chargeur fourni pendant environ 30 minutes afin de ramener la tension à un niveau approprié avant le stockage. Le non-respect de cette consigne peut endommager la batterie.
