Motor gear selection can refer to the 48Pitch motor gear chart on the attached page of the instruction manual.

NOTE

TIP

To adjust the gear mesh on an RC car, first loosen the motor mounting screws and place a piece of regular paper between the pinion gear and spur gear. Gently push the motor so the gears press against the paper, then tighten the screws. Slowly rotate the gears while removing the paper. The correct gear mesh should allow smooth rotation with a slight amount of free play, not completely tight. If the mesh is too tight, it can cause overheating and excessive wear; if too loose, it may create noise or cause the gears to skip.
